Fiber Optic Communication Systems 3rd Edition

Overview

Fiber-Optic Communication Systems | Wiley Online BooksGOVIND P. AGRAWAL is a professor at the Institute of Optics at the University of Rochester and a Fell.

Key Takeaways

The Third Edition of "Fiber-Optic Communication Systems" by Govind P. Agrawal is a comprehensive graduate-level textbook covering modern optical communication technologies, including WDM systems, optical amplification, and advanced modulation formats.

Overview

The Third Edition of this book is designed primarily for graduate students, though it can also be used for senior undergraduate courses with selected topics. It serves as both a textbook and a reference for engineers, technicians, and researchers in the field of fiber-optic communications, providing a detailed account of the principles, technologies, and recent advances in optical communication systems.

Comprehensive Coverage: The book addresses the fundamentals of fiber-optic communication, including digital optical communications, optical amplification, and ultra-long haul transmission. It also explores advanced modulation formats such as DPSK, QPSK, and QAM, which improve spectral efficiency in WDM systems. Recent Advances: The Third Edition incorporates all-optical regeneration techniques and updates on coherent transponders, space division multiplexing (SDM), and unrepeatered versus repeated transmission systems.

Pedagogical Tools: Each chapter includes problems and exercises, and a Solutions Manual is available. The book also comes with a CD-ROM containing applications and supplementary material. Reference Material: Extensive references at the end of each chapter provide access to recent research papers, making it useful for students and researchers who wish to explore original studies in optical communications.

Author

Govind P. Agrawal is a professor at the University of Rochester's Institute of Optics and a recognized expert in optics and photonics. He has authored over 400 research papers and multiple books in the field, and is a Fellow of both the Optical Society of America and the IEEE.

Applications

The book is widely used in academic courses, telecommunications industry training, and as a professional reference for engineers working on fiber-optic networks, including submarine cable systems, WDM networks, and high-speed optical links. In summary, the Third Edition of "Fiber-Optic Communication Systems" provides a thorough, up-to-date, and practical guide to the design, analysis, and implementation of modern optical communication systems, making it an essential resource for students, researchers, and professionals in the field.
