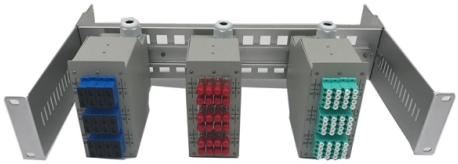
Electrical Distribution Box Assembly Price



Overview

The distribution box cost typically ranges from affordable basic models to premium solutions, depending on capacity, features, and specifications.

Key Takeaways

A complete electrical distribution box assembly typically ranges from $150 to $2,000 or more, depending on size, materials, internal components, and installation requirements.

Price Range Overview

The cost of a complete distribution box assembly varies widely based on several factors: Residential Units: Standard indoor residential panels usually cost between $150 and $1,500, including the enclosure, breakers, wiring, and professional installation. Most typical 100–125 amp services fall in the $450–$1,500 range depending on labor complexity and regional pricing. Commercial and Industrial Units: Larger or industrial-grade boxes, often made of stainless steel or powder-coated steel, can cost $1,000 to $2,000 or more due to higher durability, amperage capacity, and advanced control systems.

Material Influence: Plastic enclosures are cheaper, while metal enclosures (steel or stainless steel) are more expensive but offer better durability and corrosion resistance, especially in harsh environments. Internal Components: A box sold empty is just the shell. Adding high-quality circuit breakers, surge protectors, busbars, and smart monitoring devices significantly increases the price.

Customization and Features: Weather-resistant outdoor units, smart monitoring, remote control, and integration with building management systems can further raise costs.

Additional Considerations

Installation Costs: Professional installation is essential for safety and code compliance. Labor costs vary by region and complexity, often forming a significant portion of the total price. Longevity: High-quality distribution boxes are designed to last 25–40 years, though internal breakers may need replacement every 10–15 years.

Environmental Ratings: Outdoor or moisture-resistant units carry premium pricing compared to indoor-rated units.

Summary

For budgeting purposes, a complete electrical distribution box assembly can cost anywhere from $150 for a basic residential unit to over $2,000 for industrial-grade, fully equipped systems. The final price depends on size, material, internal components, installation, and environmental requirements. For precise pricing, it is recommended to request a custom quote from suppliers based on your specific project needs.
