Price of optical fiber cable for thermal power supply

Overview

We offer fiber optic materials from Test Equipment, Bulk Cable and Fusion Splicers to Tools, Patch Cables and Consumables.

Key Takeaways

Optical fiber cables for thermal power applications typically range from $1 to $15 per meter depending on type, core count, and thermal/industrial specifications.

General Pricing Overview

Standard fiber optic cables, such as single-mode (OS2) or multimode (OM3/OM4), are priced based on core count, jacket type, and length. For bulk orders, factory prices in 2025 range from approximately $1 to $5 per meter for standard cables, with armored or specialized cables costing more due to enhanced durability and environmental protection. Prices fluctuate with raw material costs and cable specifications.

High-

Power and Thermal-Resistant Fiber CablesFor thermal power supply or industrial laser applications, high-power fiber cables are designed to handle elevated temperatures, high optical energy, and mechanical stress. These cables feature: Large core diameters and low-loss fiber materialsRuggedized sheathing (stainless steel, armored jackets, or high-temperature polymers)Precision-polished connectors (SMA-905, FC/APC, or custom end caps)Thermal stability and active or passive cooling systems for high-power transmission Pricing for these specialized cables is higher, typically $10–$15 per meter or more, depending on power rating, cooling system, and connector type.

Active cooling systems for high-power fibers (200–450 W) add to the cost due to integrated water or heat-sink management.

Factors Affecting Cost

Cable Type: Single-mode vs. multimode, armored vs. non-armoredCore Count: Higher core counts increase material and manufacturing costsThermal and Mechanical Protection: High-temperature polymers, stainless steel sheaths, or active cooling systemsConnectorization: Precision connectors and custom end caps for high-power applicationsOrder Volume: Bulk orders often receive discounts from manufacturers RecommendationsFor standard thermal power monitoring or control networks, multimode or single-mode armored cables are sufficient. For high-power laser or optical energy transmission, invest in high-power fiber cables with thermal management features to ensure safety and longevity.

Contact suppliers for custom pricing based on project specifications, as costs vary significantly with cable design and power handling requirements. By considering these factors, you can select a fiber optic cable that balances performance, thermal stability, and cost for your thermal power supply application.
