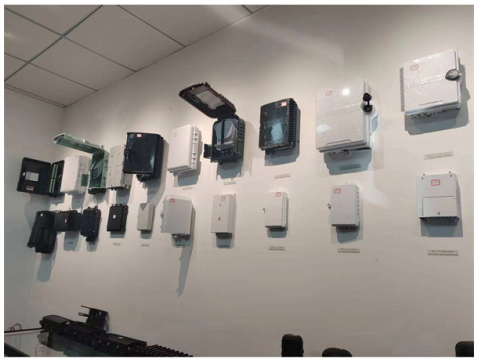
Traffic transmission after aggregation by the tap switch



Overview

From each network element, you can use switched port analyzer (SPAN) ports or optical TAPs to send traffic flows directly to this TAP aggregation switch. The TAP aggregation switch is directly connected to all of the analysis tools used to monitor the events in the. Test access points (TAP) aggregation is an alternative solution to help with monitoring and troubleshooting tasks in the data center. You can use various methods to monitor packets. Traffic aggregators are typically known as. A TAP aggregator solves this problem by collecting traffic copies from multiple network TAPs and SPAN ports, consolidating those streams, and delivering organized, optimized traffic to your monitoring and security tools. Instead of connecting every TAP directly to every tool and creating an. Unlike port mirroring, TAP aggregation provides N:M (any-to-any) packet replication, allowing you to capture different types of data in real time so that you quickly see what is happening in your network.

Cisco Nexus 9000 Series NX-OS System Management Configuration

From each network element, you can use switched port analyzer (SPAN) ports or optical TAPs to send traffic flows directly to this TAP aggregation switch. The TAP aggregation switch is

Configuring TAP Aggregation and MPLS Stripping

From each network element, you can use switched port analyzer (SPAN) ports or optical TAPs to send traffic flows directly to this TAP aggregation switch. The TAP aggregation switch is directly connected

TAP Aggregation Switch: Key to Monitor Network Traffic

The following part illustrates the typical applications of TAP aggregation switches in data center and carrier network.

Traffic Aggregators | TAP Aggregators | Visibility Nodes

Traffic aggregators bring together traffic from taps (test access points) and SPANs ports (switched port analyzers) across the network, giving a pervasive view into information-in-motion, and optimize

What Is a TAP Aggregator?

A TAP aggregator collects traffic from multiple network TAPs and consolidates it for your monitoring tools. Learn how it works, key features, and deployment options.

TAP Aggregation for Network Monitoring

The running TAP aggregation configuration on the switch receives the network packets you want to test on the tap ports and sends the copied packets from the tool ports to off-switch monitoring tools and

Network TAPs 101 eBook | Garland Technology

When configured to operate in aggregation mode, the network TAP can merge eastbound and westbound traffic flows and send it all to the attached devices via a single port.

EOS 4.36.0F

In order for a TAP-aggregation switch to receive PTP traffic, the upstream device to which it is connected should be set to statically send PTP multicast traffic to the connected port on the switch.

TAP Aggregation

© 2026 BAGYOU FIBRE NETWORKS - All rights reserved

This article details the ability of the Tap Aggregator to redirect, or steer, traffic away from the aggregation group that the Tap port belongs to. This capability allows for a more granular focus and control on

Network TAPs 101

When configured to operate in aggregation mode, the network TAP can merge eastbound and westbound traffic flows and send it all to the attached devices via a single port.

Configuring TAP Aggregation and MPLS Stripping

You can configure the TAP aggregation switch to filter specific traffic and redirect it to one or more tools. In order to redirect the traffic to multiple interfaces, a multicast group is created internally on the

Cisco Nexus 3000 Series NX-OS System Management Configuration

You can dynamically program the tap aggregation switch with a configuration that allows traffic to enter the switch through a certain set of ports that are connected to the network elements.

Network TAPs 101

• Aggregation TAPs: Merge traffic streams into one monitoring port to reduce appliance costs, often used in conjunction with filtering taps. • Replication TAPs: Create multiple copies of network data to

Cisco Nexus 9000 Series NX-OS System Management Configuration

TAP aggregation has the following guidelines and limitations: TAP aggregation: Supported on all Cisco Nexus 9000 Series switches and the 3164Q, 31128PQ, 3232C, and 3264Q

Cisco Nexus 9000 Series NX-OS System Management Configuration

Beginning from Cisco NX-OS Release 10.2 (1)F, feature tap-aggregation must be enabled for all Tap Aggregation and stripping functions. Beginning with Cisco NX-OS Release 10.2 (2)F,

Test Access Points Aggregation

In the TAP aggregation switch solution, a Cisco Nexus 9000 Series switch is connected to various points in the network at which packet monitoring is advantageous. From each network element, you can

TAP Aggregation

© 2026 BAGYOU FIBRE NETWORKS - All rights reserved

Next generation TAP Aggregation from Arista makes it possible to cost-effectively and losslessly monitor all network traffic, while capturing and analyzing only the traffic that is needed. Disruptive economics,

Network TAPs 101 eBook | Garland Technology

Network TAPs In 1994 SPAN Ports were first used with Cisco releases Catalyst series switches for troubleshooting, becoming a way to get some visibility into traffic, eventually exposing the need for
