Key Takeaways

A 4-circuit breaker distribution box is an electrical enclosure designed to house and protect up to four circuit breakers, suitable for residential, commercial, or light industrial use.

Overview

A 4-circuit breaker distribution box serves as a central hub for electrical circuits, allowing safe distribution of electricity to multiple areas or devices. It typically accommodates four individual circuit breakers, which can be standard Miniature Circuit Breakers (MCBs) or Residual Current Devices (RCDs), depending on the configuration. These boxes are essential for organizing electrical wiring, providing overload protection, and ensuring safety in electrical installations.

Construction and Materials

Many 4-circuit breaker boxes are made from durable PVC or polycarbonate, offering resistance to corrosion, impact, and environmental conditions. The robust structure ensures long-term protection for the internal electrical components. Some models include a mounting frame compatible with a wide range of breakers, including MCBs, RCDs, or combined MCB/RCD units.
