700 Distribution Box Installation Height

Overview

DELIXI Distribution box JXF705030 JXF-height 700*width 500*deep With a height of 700mm, width of 500mm, and depth of 300mm, this robust and versatile distr.

Key Takeaways

The recommended installation height for a 700mm distribution box is typically 1. 4 to 1. 7 meters from the floor to the center or bottom of the box for wall-mounted setups, ensuring accessibility and safety.

Recommended Wall-

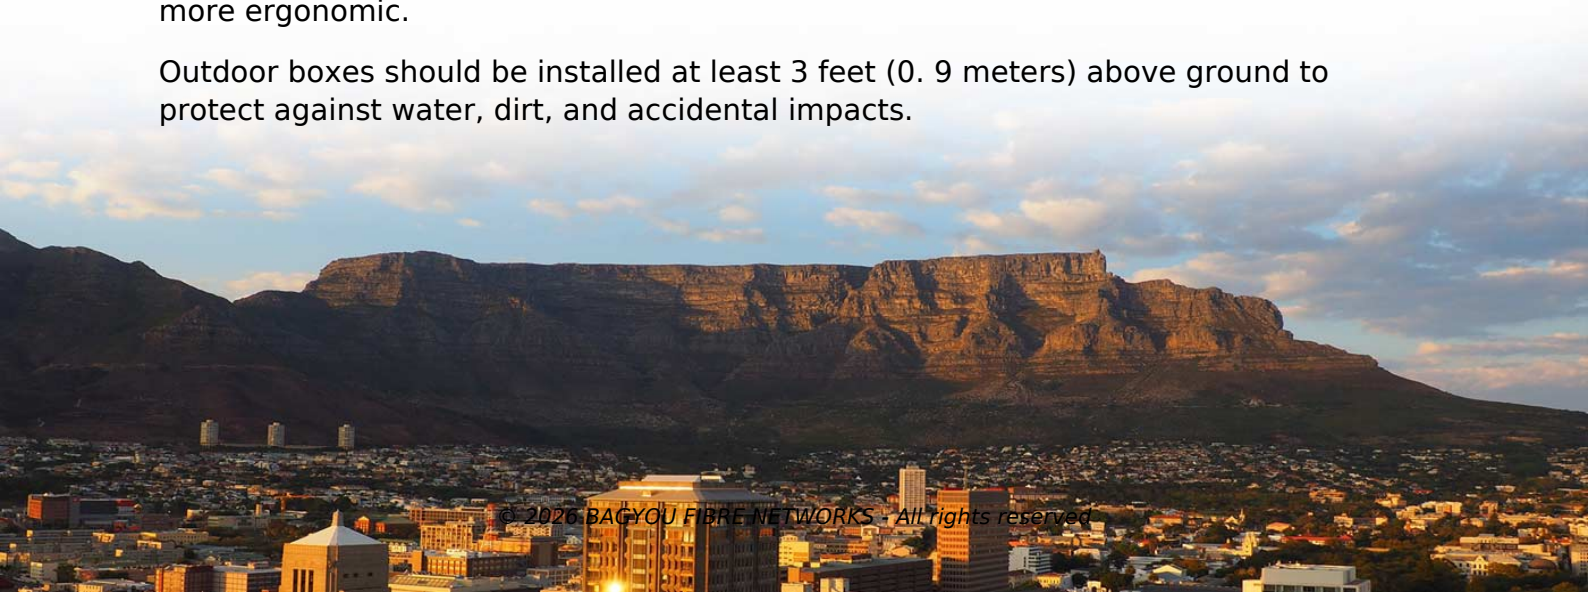

Mounted Height

For a 700mm tall distribution box, the ideal wall-mounted height is generally 4. 5 to 5. 5 feet (1.

4 to 1. 7 meters) from the floor to the center or bottom of the box. This height allows operators to access switches, breakers, and instruments comfortably without bending or stretching excessively.

For older or disabled users, a slightly lower height around 1. 2 to 1. 3 meters may be more ergonomic.

Outdoor boxes should be installed at least 3 feet (0. 9 meters) above ground to protect against water, dirt, and accidental impacts.

Ground-

Mounted or Stainless Steel BoxesIf the distribution box is ground-mounted, it should be raised 2 to 4 inches (5–10 cm) above the floor to prevent moisture damage. For stainless steel enclosures or IP67-rated boxes, the bottom surface is typically installed between 1. 3 and 1.

5 meters above the ground, balancing operator ergonomics and maintenance convenience. Consistency in height across similar boxes in the same building is recommended, with deviations within 10 millimeters for aesthetic and operational uniformity.

Additional Installation Considerations

Environment: Install in dry, well-ventilated areas away from corrosive gases, liquids, or wet locations. Accessibility: Ensure sufficient space around the box for two people to work simultaneously during maintenance or emergency handling. Standards Compliance: Follow local electrical codes such as BS 7671, IEC 60364-5-52, or NEC, and use certified components.

Protection: Outdoor boxes should have appropriate IP/NEMA ratings (e.g., IP65) to resist dust and moisture.

Summary

For a 700mm distribution box, the optimal installation height is generally 1. 4–1. 7 meters for wall-mounted boxes and 1.

3–1. 5 meters for stainless steel or IP67 enclosures, with ground-mounted boxes slightly elevated to prevent moisture damage. Proper placement ensures ergonomic access, safety, and compliance with electrical standards while protecting the box from environmental hazards.
