African Ladder Cable Tray Specifications

Overview

We supply perforated, ladder, and solid-bottom cable trays that provide reliable support for electrical and communication cables. Ideal for heavy-duty industrial projects requiring strength and ventilation.

Key Takeaways

Ladder-type cable trays in Africa are typically made from galvanized steel, stainless steel, aluminum, or fiberglass, with rung spacing of 9–18 inches, designed for heavy-duty cable support and optimal ventilation. Materials and FinishesLadder-type cable trays are manufactured from galvanized steel (GI), stainless steel, aluminum, or fiberglass, providing strength, corrosion resistance, and durability in harsh environments. Common protective finishes include hot-dip galvanization, electroplated zinc, powder coating, and stainless steel finishing, ensuring long-term performance with minimal maintenance.

Design Types

Standard Ladder Tray: Two parallel side rails with perpendicular rungs for maximum airflow and easy cable tie-downs. Single Rail Ladder: Central rail with rungs on either side, offering a lighter, open design suitable for commercial installations. Channel Ladder: Combines ladder and solid-bottom tray features for added cable protection while maintaining ventilation.

Heavy-

Duty Ladder: Constructed with thicker materials and larger side rails for high-density industrial cabling.

Dimensions and Rung Spacing

Rung spacing is typically 9 inches, but 12-inch and 18-inch options are also available. The open ladder design allows cables to enter and exit at any point, providing flexibility in complex networks.

Performance Features

Excellent heat dissipation due to open structure, reducing cable overheating. Minimal moisture and dust accumulation, suitable for African climates. Supports long cable runs, often up to 30 feet, with heavy cables.

Rapid installation and easy inspection, reducing labor costs and downtime.

Accessories and Installation

Ladder trays are available with or without covers and include accessories such as bends, tees, clamps, and supports for complete cable management systems. They are suitable for industrial, commercial, telecom, and data center applications across Africa.

Summary

African ladder-type cable trays are engineered for strength, flexibility, and durability, with multiple material options, rung spacing, and designs to accommodate heavy-duty and high-density cabling. Their open structure ensures ventilation, heat dissipation, and easy maintenance, making them ideal for diverse infrastructure projects across the continent.
