# Angola Tray-type Cable Tray Models

## Overview

At Angola Wire, we specialize in providing a diverse range of building cable trays, available in various materials and finishes.

## Key Takeaways

Tray-type cable trays in Angola are typically made from steel, stainless steel, or aluminum, with options for solid, ventilated, or wire mesh designs, conforming to international standards such as NEMA VE 1/2 and ASTM specifications. Materials and FinishesTray-type cable trays are manufactured from carbon steel, stainless steel (AISI 316L), or aluminum alloys, chosen based on environmental conditions and corrosion resistance requirements. Finishes include hot-dip galvanization, pre-galvanization, powder coating, or natural stainless steel, providing protection against atmospheric corrosion and chemical exposure.

Wire mesh trays are also available for lightweight and flexible cable management.

### Types of Tray

Solid Bottom Tray: Provides maximum protection for cables, suitable for sensitive or high-voltage installations. Ventilated Tray: Features perforations or slots to allow heat dissipation and airflow, reducing cable overheating. Wire Mesh Tray: Lightweight, easy to install, and ideal for complex routing or retrofit applications.

### Dimensions and Load Ratings

Tray widths typically range from 50 mm to 600 mm, with depths from 50 mm to 150 mm, and rung spacing of 150–230 mm for ladder-type trays. Load ratings depend on material, span, and tray type, and must comply with manufacturer specifications and NEMA VE 1/2 guidelines.

### Accessories and Installation

Tray systems include bends, tees, elbows, drop-outs, supports, and covers to accommodate routing and structural requirements. Installation should follow ANSI/NFPA 70 (NEC) and NEMA VE 2 guidelines, ensuring proper support, spacing, and minimum bend radius for cables. Solid covers can be added for additional protection against dust, moisture, or electromagnetic interference.

Compliance and StandardsTray-type cable trays in Angola are designed to meet international standards such as NEMA VE 1/2, ASTM A123, A653, A1008, B633, and local electrical codes.

C

E marking or equivalent certification may apply for imported products, ensuring compliance with safety and quality requirements.

### Summary

For Angola installations, tray-type cable trays should be selected based on material suitability, environmental conditions, load requirements, and compliance with international standards. Wire mesh, ventilated, and solid bottom trays provide flexibility for different applications, while accessories and proper installation ensure safe and efficient cable management.
