CIF price of 1MWh of hybrid energy system exported from five Central Asian countries

Overview

Renewable energy in Central Asia: An overview of potentials, This paper provides a comprehensive yet concise overview of the potential, deployment, outlook.

Key Takeaways

Estimated CIF price of 1 MWh of hybrid renewable energy from Central Asia ranges between USD 45–70, depending on technology mix, country, and shipping costs.

Estimating Base Electricity Costs

Hybrid energy systems typically combine solar PV, wind, and small-scale hydropower.

According to IREN

A, the levelized cost of electricity (LCOE) for new utility-scale renewables in 2024 was: Onshore wind: USD 0. 034/kWhSolar PV: USD 0. 043/kWhHydropower: USD 0.

057/kWh This translates to USD 34–57 per MWh for generation alone. Central Asian countries such as Kazakhstan, Uzbekistan, Turkmenistan, Kyrgyzstan, and Tajikistan generally have slightly higher LCOEs due to less mature infrastructure and higher financing costs, so a regional adjustment of 10–20% is reasonable, giving USD 37–68 per MWh.

Adding CI

F ComponentsCIF pricing includes cost of goods, insurance, and freight. For electricity equipment exports: Freight and logistics: 5–10% of base cost for regional shippingInsurance: 1–2% of base cost Applying these adjustments to the regional LCOE range results in a CIF-adjusted price of approximately USD 45–70 per MWh. This range accounts for variations in: Technology mix (solar-heavy vs wind-heavy)Distance to export ports or neighboring marketsLocal tariffs, taxes, and insurance premiumsKey ConsiderationsCountry-specific factors: Kazakhstan and Uzbekistan have more developed grids, potentially lowering CIF costs, while Kyrgyzstan and Tajikistan may face higher transport and insurance costs due to mountainous terrain.

Hybrid system configuration: Systems combining solar and wind may achieve lower LCOE than single-technology systems due to complementary generation profiles. Market fluctuations: Global commodity prices, shipping rates, and insurance premiums can shift CIF prices by ±10% over short periods.

Conclusion

While exact CIF prices for 1 MWh of hybrid energy exported from Central Asia are not publicly reported, a reasonable estimate is USD 45–70 per MWh, reflecting generation costs, regional adjustments, and shipping/insurance components. For precise pricing, project-specific quotations from suppliers and logistics providers are recommended.
