Cable tray support leg installation distance

Overview

Explore the essential cable tray support spacing requirements for safe and efficient installations. Learn NEC guidelines for perforated, ladder, and wire mesh trays.

Key Takeaways

Cable tray supports should generally be spaced 1. 5 to 3 meters apart for horizontal runs, with closer spacing at bends, corners, and vertical sections to ensure stability and compliance with standards.

Horizontal Support Spacing

For straight horizontal runs, the typical distance between cable tray supports (legs or hangers) should range from 1. 5 meters to 3 meters depending on the tray type, load, and manufacturer specifications.

The NE

C specifies that supports must not exceed 5 feet (1. 52 meters) for ladder-type trays, with an ideal range of 4 to 6 feet (1. 2 to 1.

8 meters) to evenly distribute weight and prevent sagging. Wire mesh trays, which carry lighter cables, may allow slightly longer spans, but spacing should still ensure uniform support.

Vertical and Special Sections

For vertical runs, supports should be fixed to the building structure with a spacing preferably less than 2 meters. At corners, bends, T-junctions, or tray ends, it is recommended to install a support on each side, arranged symmetrically, to prevent stress on the cables and maintain tray stability. For long spans exceeding 30 meters, additional fixed supports are necessary to distribute weight and avoid sagging.

Load and Tray Type Considerations

Ladder trays: Heavier loads require closer support spacing, typically following NEC guidelines of 1. 2–1. 8 meters between supports.

Perforated trays: Require careful leveling and support placement to avoid uneven stress. Wire mesh trays: Suitable for lightweight cables; supports can be spaced slightly further apart but must still maintain stability.

Installation Tips

Ensure supports are level and securely attached to the building structure. Use appropriate hardware (bolts, clamps, or rods) for the tray type. Maintain even cable distribution within the tray to prevent overloading.

Regularly inspect supports for wear, corrosion, or damage and tighten or replace as needed. By following these guidelines, cable tray systems will remain structurally sound, safe, and compliant with electrical standards while allowing for proper cable management and maintenance access.

Cable tray support spacing calculator

Not sure how far apart to space your cable tray supports? Use our free cable tray support spacing calculator to find the precise spacing.

Cable Tray Technical Guide A practical guide to product selection and ...

Cable tray length is selected based on the load to be supported, the distance between the supports (also referred to as the span), and handling and installation constraints.

Cable Support Distances

Cable Support Distances Although BS 7671 touches on the subject of cable supports, it does not detail specifically what these support distances should be. Section 522.8 (Other Mechanical Stresses (AJ))

Guide to cable support systems

The mesh cable trays are suitable for the installation of power cables and cables in various areas of application. The grid spacings mean that cables can be inserted and run out in various directions.

Best Practice Guide to Cable Ladder and Cable Tray Systems

Cable ladders and cable trays should be mounted far enough off the floor or roof to allow the cables to exit through the bottom of the cable ladder or cable tray.

INSTALLATION GUIDE

Center hung tray supports allow for quicker and easier cable installation by allowing cables to be deposited into tray systems from each side. There is a maximum load capacity per hanger of 318 kg

Wire Mesh Tray Technical Guide

Cablofil wire mesh tray and sup-ports are designed to support any cable load allowed by the NEC when supports are spaced on 8'' spans. Only the hea-viest cables (750 kcmil mulitconductor power or

Safely Installing, Maintaining and Inspecting Cable Trays

Cable trays support cables across open spans in the same way that roadway bridges support traffic. Cable trays can provide a safe component of a power, low voltage control, data or
