Can an SC to LC fiber optic patch cord be connected to a switch

Overview

For example, if your network switch has LC ports and your patch panel has SC connectors, then you will need an LC to SC fiber optic adapter.

Key Takeaways

An SC to LC fiber optic patch cord can be connected to a switch only if the switch has compatible SC or LC ports, or if an appropriate adapter is used. Connector CompatibilitySC and LC connectors differ in size and design: SC connectors are square-shaped with a 2. 5mm ferrule, while LC connectors are smaller, rectangular, and use a 1.

25mm ferrule. Switches typically have ports designed for a specific connector type, often LC for modern SFP/SFP+ modules and SC for older or legacy switches. Directly plugging an SC connector into an LC port is not possible due to the size and shape mismatch.

Using SC to LC Patch Cords

An S

C to LC patch cord has an SC connector on one end and an LC connector on the other. This allows you to: Connect the LC end to a switch port that accepts LC connectors (common in SFP/SFP+ modules)Connect the SC end to a device, patch panel, or transceiver that uses SC ports This type of patch cord is commonly used when linking legacy SC-based equipment to modern LC-based switches or transceivers.

Practical Considerations

Fiber Type: Ensure both ends use the same fiber type—single-mode (SMF) or multimode (MMF)—to avoid signal loss. Transceiver Compatibility: If connecting to an SFP or SFP+ module, verify the module supports the fiber type and connector. Adapters: If the switch port does not match either connector, a fiber adapter or media converter may be required.

Insertion Loss: Using adapters or mismatched connectors can slightly increase insertion loss, so high-speed or long-distance links should be tested for performance.

Summary

You cannot directly plug an SC connector into an LC port on a switch. However, an SC to LC patch cord allows connectivity between devices with SC ports and switches with LC ports, provided the fiber type matches and the switch supports the intended transceiver or module. This makes SC to LC patch cords a practical solution for bridging legacy and modern fiber networks.
