Aisle Containment for Server Rooms and Data CentersShop aisle containment solutions at Server Racks Online. Explore hot and cold aisle containment systems.

Key Takeaways

Cold aisle containment systems for server racks typically range from $1,500 to $5,000 per aisle, depending on size, customization, and installation requirements.

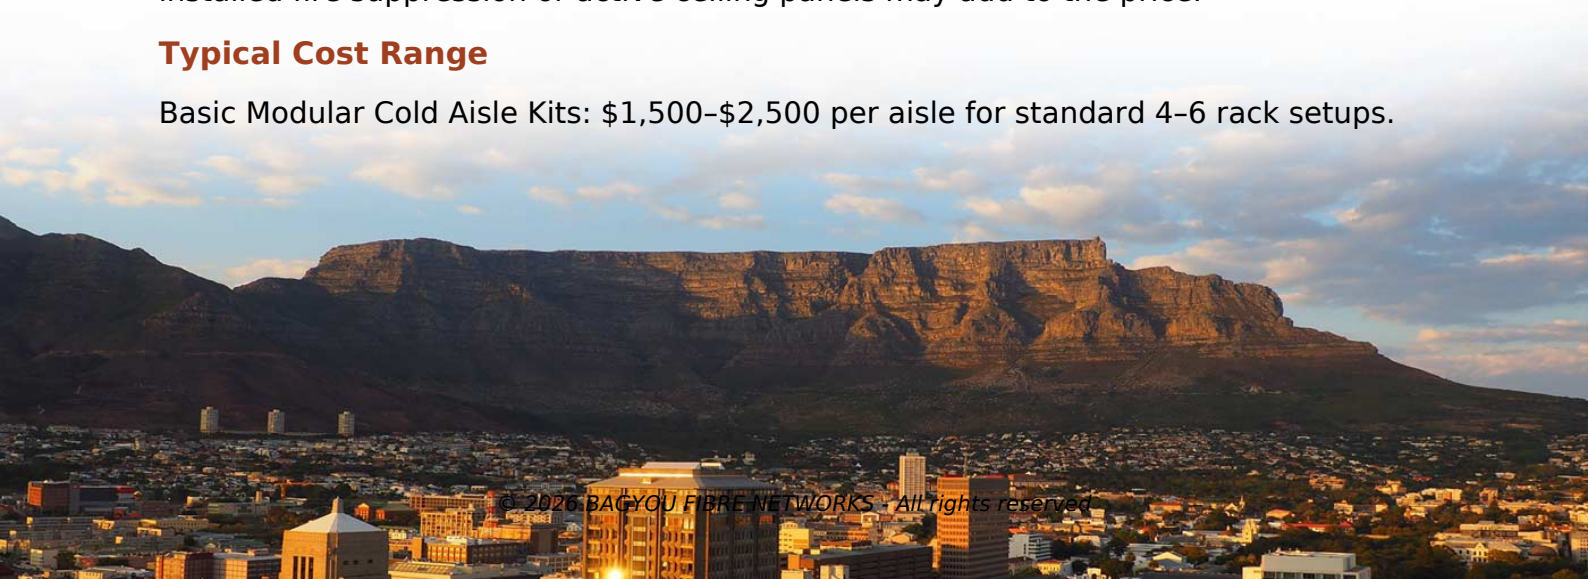

Pricing Overview

The cost of a cold aisle containment system depends on several factors: Rack Size and Aisle Length: Standard 42U to 48U racks are commonly used, and longer aisles or wider racks increase material costs. System Type: Modular kits with sliding or hinged doors, roof panels, and ceiling containment vary in price. Manual systems are generally less expensive than automated or fire-integrated systems.

Customization: Custom dimensions, colors, or accessory layouts for specific data center configurations can increase costs. Installation: Some systems are designed for easy self-installation, while others may require professional setup, affecting total cost. Integration with Fire and Cooling Systems: Advanced containment units with pre-installed fire suppression or active ceiling panels may add to the price.

Typical Cost Range

Basic Modular Cold Aisle Kits: $1,500–$2,500 per aisle for standard 4–6 rack setups.

Mid-

Range Systems: $2,500–$4,000 per aisle, including sliding doors, roof panels, and moderate customization.

High-

End or Fully Customized Systems: $4,000–$5,000+ per aisle, with integrated fire suppression, advanced airflow control, and enterprise-grade materials.

Additional Considerations

Energy Savings: Properly installed cold aisle containment can reduce cooling costs by 20–50%, potentially offsetting initial investment over time. Retrofit vs. New Installation: Retrofitting existing data centers may require phased installation and additional engineering, slightly increasing costs.

Lead Time and Support: Supplier lead times, warranty, and after-sales support can influence the total cost of ownership.

Conclusion

When budgeting for cold aisle containment, consider aisle length, rack density, system type, and integration requirements. While upfront costs range from $1,500 to $5,000 per aisle, the long-term energy savings and improved cooling efficiency often justify the investment, especially in high-density data centers.
