Copper busbar dimensions for low-voltage switchgear

Overview

Actual bus bar dimensions depend on enclosure temperature, ventilation, derating and installation conditions. Sizing busbar runs in Bus Bar Size switchgear involves selecting standard manufactured rectangular dimensions (such as 20x5, 30x10, 50x10, or 100x10 mm). Follow these quick, step-by-step instructions to find the recommended size for electrical panel bus bars using continuous current ratings: Entering current: Input the target load current in Amperes (A) into the Load Current input field. The current rating is calculated from the conductor cross-sectional area, material (copper or aluminium), and maximum. A copper busbar is a flat or rectangular strip of high-conductivity copper used as a shared connection point for multiple electrical circuits.
