Direct Sales of North Korean Bridge Trays

Overview

Google''s service, offered free of charge, instantly translates words, phrases, and web pages between English and over 100 other languages.

Key Takeaways

Direct international sales of North Korean bridge trays are not publicly available due to sanctions and trade restrictions, though the domestic market and cross-border trade with China are active.

Market Overview

North Korea produces a variety of packaging trays made from materials such as PET, PVC, and polypropylene, available in flexible and semi-flexible forms for industrial, food, retail, and cosmetic applications. The domestic market is monitored and analyzed by research firms, indicating a structured but state-controlled production environment.

Trade and Export Context

North Korea's exports are highly concentrated, with China accounting for the overwhelming majority of trade, often estimated at 95% of total exports. Official statistics are limited, and much of the trade occurs through mirror statistics or Chinese customs data due to North Korea's opaque reporting practices. The country exported approximately US$387.

9 million worth of goods in 2024, though packaging trays are not specifically itemized in public export data.

Cross-

Border Logistics

Goods, including industrial and consumer items, are transported via strategic border points such as the Sino-North Korean Friendship Bridge and customs houses in Hunchun and Rason. Trucks carrying over 10 tons of cargo cross daily, often including both sanctioned and non-sanctioned items. Chinese customs inspections are relatively light at these points, facilitating the movement of goods into North Korea.

Legal and Practical Considerations

Due to international sanctions, direct sales of North Korean products, including bridge trays, to foreign buyers are heavily restricted. Most trade occurs through China or other intermediaries, and any attempt to purchase directly from North Korea would likely violate UN and national sanctions. Businesses interested in North Korean packaging trays typically rely on market research reports or indirect sourcing through Chinese intermediaries rather than direct procurement.

Conclusion

While North Korea manufactures bridge trays and maintains a domestic and regional trade network, direct international sales are not legally feasible. Interested parties can access market insights, production trends, and potential indirect sourcing opportunities through research reports and Chinese trade channels, but must remain compliant with international sanctions.
