Embedded Distribution Box Specifications

Overview

Distribution Box and Selection Guide: Internal Structure, Components. Learn how to choose a distribution box and understand its internal structure, inclu.

Key Takeaways

Embedded distribution boxes are modular enclosures designed for wall embedding, supporting DIN rail-mounted modules, with IP40 to IP67 protection, ABS or metal construction, and rated for voltages up to 415V and currents up to 100A.

General Construction and Materials

Embedded distribution boxes are typically made from ABS plastic for lightweight, corrosion-resistant applications or cold-rolled/stainless steel for higher mechanical strength and chemical resistance. Plastic boxes are often ivory white with a transparent front door for module visibility, while metal enclosures may feature hinged doors with removable flanges for top or bottom cable entry.

Module Capacity and DIN Rail Compatibility

These boxes are designed to house standard 18mm wide modules mounted on 35x7mm DIN rails. Common configurations include 8-module boxes, but larger or modular systems are available for industrial applications. The modular design allows for flexible assembly of signal or power distribution components, including circuit breakers, relays, and terminal blocks.

Electrical Ratings

Embedded distribution boxes support operating voltages of 240/415V and maximum currents up to 100A for standard ABS plastic models. Industrial metal enclosures can accommodate higher currents and voltages depending on the configuration and internal components.

Protection and Environmental Ratings

Plastic embedded boxes typically provide IP40 protection, suitable for indoor installations. Industrial-grade metal boxes can achieve IP54 or higher, with some models rated IP67 for dust and water resistance, suitable for harsh environments.

Mounting and Installation

Embedded boxes are designed to be recessed into walls, with a front frame slightly larger than the box for a flush finish. Metal enclosures may offer wall-mounted or embedded options, with slots or flanges for secure installation. Connectivity and FeaturesDIN rail-mounted modules allow easy installation and replacement.

Pre-wired or pluggable connections are available for M8, M12, or M16 connectors, supporting both signal and power distribution. Some boxes include LED indicators for power and function status, and PUSH IN contacts for simple cable connection. Cable lengths for pre-wired boxes typically range from 1m to 10m, with customization options available.

Standards Compliance

Embedded distribution boxes comply with IEC60670-24 for plastic enclosures and GB7251. 3-2006 or equivalent standards for metal low-voltage switchgear. Industrial models are certified for modular and decentralized power and signal distribution, ensuring safety and reliability in automation and processing environments.

In summary, embedded distribution boxes provide a robust, modular, and flexible solution for electrical distribution, with options ranging from small ABS plastic boxes for residential use to industrial metal enclosures with high IP ratings for harsh environments. They support DIN rail modules, pre-wired connections, and standardized electrical ratings, making them suitable for a wide range of applications.
