Fiber Optic Heat Shrink Tubing Specifications and Models

Overview

Fiber Optic Accessories Heat Shrink Tube Overview LongXing optical fiber heat shrink tubes consist of a rod of reinforcing the splice, hot fusion tubing and cross-linked polyolefin.

Key Takeaways

Fiber optic heat shrink tubing is specified by material, shrink ratio, fiber type compatibility, environmental resistance, and mechanical protection features.

Material Composition

Fiber optic heat shrink tubing is typically made from cross-linked polyolefin, which provides flexibility, durability, and uniform shrinkage when heated, ensuring a tight seal around fiber splices and connectors. High-performance variants may use fluoropolymers like FEP or PTFE for extreme thermal stability and chemical resistance, suitable for mission-critical or harsh environments. Some tubing includes a hot-melt adhesive liner or polyamide coating to create a watertight and gastight seal.

Construction and Design

Reinforced Rod: Stainless steel, quartz, or ceramic rods are often embedded to provide structural support during splicing. Hot Fusion Tube: Inner thermal fusion layer ensures smooth, bubble-free shrinkage and mechanical strength at the fusion joint. Clear Sleeve: Transparent outer layer allows visual inspection of the splice before shrinkage.

Single vs Ribbon Fiber: Tubing is available for single fiber or ribbon fiber configurations, with customizable designs for specific applications.

Shrink Ratios and Dimensions

Typical shrink ratios range from 2: 1 to 3: 1, allowing the tubing to accommodate various fiber diameters and closure sizes. Longitudinal shrinkage is usually 5–15%, so extra length is recommended to ensure full coverage after recovery. Tubing lengths and diameters can be customized based on project requirements, including closure size and cable diameter.

Environmental and Mechanical Specifications

Moisture Resistance: Adhesive-lined or hot-melt inner layers provide protection against humidity and water ingress.

U

V and Chemical Resistance: Cross-linked polyolefin and fluoropolymer variants resist UV radiation, solvents, acids, and oils. Temperature Range: Standard polyolefin tubing handles moderate temperatures, while fluoropolymer tubing can withstand continuous operation above 200°C. Mechanical Protection: Tubing rebuilds the fiber coating at the splice, providing strain relief, impact resistance, and maintaining optical transmission performance.

Applications

Indoor and Outdoor Fiber Splicing: Protects splices in telecom, data centers, and LAN/WAN networks. Harsh Environments: Suitable for underground, coastal, or chemically aggressive locations.

High-

Density Cabling: Multi-compartment tubing bundles multiple fibers while maintaining organization and protection. Visual Inspection: Clear sleeves allow verification of fiber alignment before heat shrink application.

Key Considerations

Use a controlled heat source (heat gun or splice oven) to avoid micro-cracks or misalignment. Select tubing based on fiber type, environmental exposure, and mechanical requirements. Adhesive-lined options are recommended for watertight sealing in outdoor or high-humidity installations.

Fiber optic heat shrink tubing combines mechanical reinforcement, environmental protection, and optical performance preservation, making it a critical component in reliable fiber optic networks.

Fiber Optic Adapter

Fiber Optic Accessories Heat Shrink Tube Overview LongXing optical fiber heat shrink tubes consist of a rod of reinforcing the splice, hot fusion tubing and cross-linked polyolefin. To rebuild the coating of

Heat Shrinkable Tubing for Fibre Optic Splice Closure

Manufactured from cross-linked polyolefin, this tubing combines UV stability, corrosion resistance, and high mechanical strength, making it ideal for outdoor, underground, and exposed environments

Fiber Optic Heat Shrinkable Splice Tube-BROALINK TECHNOLOGY

Rebuild the Coating of Fiber: Consist of a rod of reinforcing the splice, heat fusion tubing and cross-linked polyolefin, to provide mechanical strength at the fusion joint area and keep optical

Optical Fiber Heat Shrink Protective Tube 40mm 45mm 60mm Fiber

Optical Fiber Heat Shrink Protective Tube 40mm 45mm 60mm Fiber Pipe Fusion Splice Protection Sleeve, Find Details and Price about Heat Shrinkable Tubing Shrinkable Tube from Optical Fiber

Fiber Shrink Tube Fiber Splice Tube

Fiber Heat Shrink Tube, also referred to as Fiber Splice Tubes, Fusion Protection Tube, or Splice Protection Tube, plays a crucial role in modern communication

Fiber Optic Protection Splicing Sleeves Heat Shrink Tube

A specially designed cross-linked clear heat shrinkable tubing, with clear fusion tubing liner, providing strength member and protection to fiber optical splices

Heat Shrink Tubing for Cable Insulation & Protection

Heat shrink tubing is a versatile solution used for insulation, protection, and strain relief for cables, connectors, and other components. Available in various

40mm Clear PE Heat Shrinkable Tube Fiber Optical

The fiber optic heat shrink tubes is tight and the metal support maintains its strength to prevent the fiber from breaking at the splice. Smooth deburred stainless steel

500pcs Optical Fiber Heat Shrink Tubes Fiber Optic Heat Shrink

© 2026 BAGYOU FIBRE NETWORKS - All rights reserved

Transparent Sleeve : Shrinkage can be easily detected before splicing for ease of use. Heat Shrink Protection : Housing heat shrink tubing is used to protect fiber optic soldering, suitable

Optic fiber heat shrink tube

Shop high-quality optic fiber heat shrink tubes for reliable fiber protection. Enjoy durable, transparent, and efficient solutions for your networking needs.

Fiber Splice Heat Shrink Tube

Buy Heat Shrink Tubes, Heat-Shrink Splice Protectors at Fiberinthebox. The most competitive fiber optic splicing equipments manufactuer selling online high performance Fiber Splice Heat Shrink Tubes 1

Fiber Optical Heat Shrinkable Tubing

Taiwan Yun Lin is a proficient heat shrink tubing manufacturers; we supply types of heat shrinking tubes/ heat shrinkable tubing such as polyolefin, PVC, thin wall,

Heat Shrink Tubing for Protecting Fiber Optic Cables

Learn about the benefits of using heat shrink tubing to protect fiber optic cables and telecommunication systems to improve telecom performance.

Fiber Optic Cable Protection: Heat Shrink Tubing for Telecom Networks

Explore the critical role of heat shrink tubing in safeguarding fiber optic cables within telecom networks. This comprehensive guide covers how it enhances durability, protects against

Heat Shrink Tubing for Fiber Optic Closures

Heat Shrink Tubing for Fiber Optic Closures Moodel:HSTFC Heat Shrink Tubing for Fiber Optic Closures (terminal box) is with a layer of spiral coated hot melt adhesive in the internal surface. Out layer

Fiber Optic Closure Heat Shrink Tube – Maxwel

Heat Shrink Tube for fiber optic closure is made from heavy wall cross-linked polyolefin, coated with spiral polyamide adhesive inside the wall. It has high shrink ratio of 4:1 and wide temperature range,

Fiber Optic Protection Splicing Sleeves Heat Shrink Tube

All drawings, weights and dimensions details, as well as tube and fibre colours in this document are only indicative and must not be considered contractual.

Fiber Splice Heat Shrink Tube

© 2026 BAGYOU FIBRE NETWORKS - All rights reserved

Fiber Splice Heat Shrink Tube is ordinarily made of nylon or polyolefin. They provide good electrical insulation, protection from dust, solvents and other foreign materials, as well as strain relief. If
