Fiber Optic Methane Sensor Price Quote

Overview

Fiber Optic Sensors – MouserMouser offers inventory, pricing, & datasheets for Fiber Optic Sensors. Methane (CH4) Air Quality Sensors – MouserMouser offers.

Key Takeaways

Fiber optic methane sensors typically cost between $500 and $1,500 per sensor node for fixed installations, with specialized research-grade devices potentially costing more.

Price Range and Factors

For industrial or IoT applications, fixed methane sensor nodes, which can include fiber optic sensors, are generally priced at $500–$1,500 per unit, with additional annual service fees for monitoring and data management depending on the vendor and deployment scale (Energy Solutions). These sensors are capable of detecting methane at very low thresholds (0. 05–0.

2 kgCH_4/hour), making them suitable for continuous monitoring of critical assets such as compressor stations or gas distribution hubs. For research-grade or experimental fiber optic methane sensors, such as those based on multimode interference (MMI) or Mach–Zehnder interferometers, costs are less standardized. These devices often involve specialized coatings (e.g., ZIF-8/PDMS films) and precise optical components, which can significantly increase the price.

While exact retail prices are not publicly listed, the complexity of fabrication, sensitivity, and fast response times suggest that custom or lab-scale fiber optic methane sensors can cost several thousand dollars per unit.

Cost Influencing Factors

Sensor Type and Technology: MMI-based or photonic crystal fiber sensors with high sensitivity and fast response times are more expensive than simpler optical fiber designs. Detection Range and Sensitivity: Sensors capable of detecting methane at ppm levels or providing real-time monitoring typically cost more. Deployment Scale: Bulk purchases for industrial IoT networks may reduce per-unit costs, while single research units are more expensive.

Additional Features: Remote monitoring, explosion-proof design, and integration with IoT platforms can increase the overall cost. Comparison with Other Methane Detection MethodsDrone-based optical gas imaging: $4,000–$10,000 per large site survey. Satellite-based detection: $0.

5–$2. 0 per km² per pass, suitable for large-scale monitoring. Fixed IoT/fiber optic sensors: $500–$1,500 per node, ideal for continuous, localized monitoring.

Summary

For practical purposes, industrial fiber optic methane sensors are in the $500–$1,500 range per node, while specialized research-grade optical fiber sensors can cost several thousand dollars depending on sensitivity, fabrication complexity, and additional features. These sensors offer advantages such as intrinsic safety, remote monitoring, and resistance to electromagnetic interference, making them a valuable investment for both industrial and research applications.

Article Content

Methane (CH4) Air Quality Sensors – Mouser

Mouser offers inventory, pricing, & datasheets for Methane (CH4) Air Quality Sensors.

A Non-Source Optical Fiber Sensor for Multi-Point Methane Detection

A 16-channel fiber splitter and a multi-channel time-sharing acquisition module are employed within the sensor, enabling simultaneous detection of methane gas at 16 points by a host. Furthermore, the

Optical Fiber Methane Sensor Based on Mach–Zehnder

The optical fiber device is not selective to methane, but the sensitive film coated on the optical fiber surface is selective to methane. Therefore, the

Fibre optic techniques for remote spectroscopic methane detection—from ...

This paper will describe a particular realisation of a fibre optic, highly multiplexed (up to 128 points) realisation of a methane gas detection system designed for safety monitoring applications

© 2026 BAGYOU FIBRE NETWORKS - All rights reserved

High-resolution fiber methane sensor based on diode laser and its

Tunable diode laser absorption spectroscopy (TDLAS) based optical fiber methane sensing technology has a number of advantages compared with conventional electronic methane

Highly Sensitive and Self-Calibrating Fiber Optic SPR Methane Sensor ...

Methane, a highly flammable and explosive gas, poses significant safety risks and challenges for industrial applications. A highly sensitive sensor based on surface plasmon resonance

A Sensitive, Low-Cost Methane Sensor

Currently, high-end optical methane sensors can range from US$10,000 to US$100,000 each, with the advantages of precision, sensitivity and accuracy. Midwave infrared light-emitting

Highly Sensitive and Self-Calibrating Fiber Optic SPR Methane Sensor ...

This sensor measures methane concentration while providing self-calibration. The photonic crystal fiber features a D-type structure with grooves, where composite two-dimensional material film and gold

(PDF) Active Fiber Gas Sensor for Methane Detecting ...

The setup of the proposed all-optical methane concentration sensor based on laser heated fiber Bragg grating.

Comb Filter-Based Fiber-Optic Methane Sensor System With

A remote fiber-optic methane gas sensor system is proposed and demonstrated with accurate gas concentration measurement and good mitigation of cross gas sensitivity. We use a

Application in Coal Mine of Fiber Methane Monitoring System Based

As for optic fiber methane sensor based on spectrum absorption, it uses narrow source, so it can avoid the interference of other gases . So optical fiber methane monitoring system has

Optical Methane Sensor Based on a Fiber Loop at 1665 nm

A fiber loop method for methane sensing using a 50 mm gas gap at 1665 nm is introduced for the first time, to our knowledge. A pulse of light is coupled into the loop and goes

Fibre Bragg Grating Sensors and Interrogators

© 2026 BAGYOU FIBRE NETWORKS - All rights reserved

An unpackaged FBG sensor supplied in a single mode optical fibre for strain and temperature measurements. Available to purchase together with a Smart Fibres interrogator.

A Non-Source Optical Fiber Sensor for Multi-Point Methane Detection

In order to develop an accurate monitoring method for methane gas concentration at different locations in a mine environment, a non-source optical fiber sensor for multi-point methane

CH4 Sensors

A methane sensor is useful for detecting and monitoring methane gas levels indoors or outdoors, ensuring safety by alarming to prevent explosive hazards.

Optical Fiber Methane Sensor Based on Mach–Zehnder ...

The factors affecting the sensitivity of the methane sensor are analyzed. Methane sensors with various parameters are fabricated and tested on a methane sensor platform for

Temperature-compensated ppb-level methane detection system

In this work, we demonstrate a temperature-compensated heterodyne interferometric PTS (HI-PTS) gas sensor capable of detecting CH 4 at parts-per-billion (ppb) levels.

Fiber optic multipoint remote methane sensing system based on

An all optical fiber multipoint methane sensing system based on a new pseudo differential detection technique, operating at the near-infrared wavelength of 1645.54 nm, is developed for
