Finnish Ladder-Type Cable Tray

Overview

The ladder-type cable tray is designed with two long side rails that are connected by evenly spaced rungs, resembling a ladder. This structure is especially useful for supporting heavy-duty cables over long distances. These include power, armored, control, instrumentation, telecommunication, and fiber optic cables. Our cable trays are produced in fit for purpose materials like stainless steel, galvanized, aluminium and fibreglass (FRP/GRP) composites to suit any project type both offshore and onshore. This is used in various industries for distribution of power throughout the premises. Unlike conduit systems, cable trays allow cables to be laid in bundles, improving accessibility, heat. Explore our full collection of Metallic Ladder 3D Drawings, including horizontal fittings, vertical fittings and metallic tray. Straight sections are available in multiple heights, lengths and widths.
