Handheld power distribution box trips

Overview

We can open the door of the power distribution box. Remember to cut off the main power first! In case of tripping problem, we can first determine which circuit has the problem, and then turn on the switch to restore the power supply. In most cases, repeated. Small power distribution unit tripping usually has the following situations: Overload: When the load connected to the circuit exceeds the load capacity of the distribution box and circuit design, it will cause overload tripping. When they start tripping, overheating, or making strange noises, it's more than just an inconvenience - it's your home's cry for help. Check each wire for damage that may lead to a short. Check the tightness of electrical connections along the power supply. There are two test kits for use the Digitrip 1150 and the Digitrip 520 family: The functional test kit MTST230V: Digitrip 520 series and 1150 in both Magnum and NRX breakers, 310+ and 210+ circuit breakers Handheld, battery powered.
