Height of distribution box bracket from the ground

Overview

The standard height for installing a distribution box is 1. 5 meters (5 feet) from the ground, providing comfort and safety for most people. Industrial settings may require a higher height, especially in areas with high foot traffic or machinery. Ground-mounted foundations should be 50 to 100 mm above ground level. According to the "Code for Acceptance of Construction Quality of Building Electrical Engineering" GB50303-2002, the vertical distance between the bottom surface of the fixed stainless steel enclosure ip67 and the ground should be greater than 1. Check for proper IP/NEMA ratings and material quality. The fixing method should be firm and reliable to avoid movement or tilting of the box due to vibration or collision.
