High-density network cabinets with flame retardant properties available in stock

Overview

Data Center Cabinets and Server Rack Cabinets Explore server cabinets and data center cabinets designed for high-density IT environments. CPI rack cabinets.

Key Takeaways

High-density network cabinets with flame-retardant construction are available from leading manufacturers like Legrand, Panduit, Chatsworth, and Justrite, offering robust, fire-resistant enclosures suitable for data centers and enterprise networks.

Available Options

Legrand Cabinets Legrand offers T-Series, T6, and LX cabinet platforms designed for high-density applications. These cabinets feature fully welded steel construction, high static and dynamic load ratings, and customizable cable and airflow management. While primarily focused on structural robustness and thermal efficiency, these cabinets can be configured for demanding environments, including options for hot and cold aisle containment.

Panduit Network Cabinets Panduit Net-Access™ N-Type and S-Type cabinets are steel enclosures optimized for high-density deployments. They support standard 19-inch EIA rack-mounted equipment, adjustable mounting rails, perforated or solid doors, and advanced cable management. These cabinets are suitable for mission-critical IT infrastructure and can integrate with PDUs, fan trays, and airflow solutions to maintain thermal efficiency in dense network setups.

Chatsworth Products (CPI) Chatsworth's ZetaFrame® and GT-Series GlobalFrame® Gen 2 cabinets provide high-density, scalable solutions with strong structural integrity.

The Z4-

Series SeismicFrame® cabinets are tested to Telcordia GR-63-CORE standards, ensuring durability under extreme conditions. These cabinets support airflow management, cable routing, and high-density IT equipment, making them ideal for data centers and telecom rooms.

Justrite E

N Cabinets For flame-retardant protection, Justrite EN cabinets are specifically designed with steel bodies and doors over multiple layers of fire-resistant gypsum and mineral fiber insulation. They are independently fire-tested, FM approved, and GS certified, meeting EN 14470-1, EN 14727, NFPA 30, and OSHA requirements. Available in 30- and 90-minute fire protection models, these cabinets provide maximum heat resistance while safeguarding sensitive equipment.

Key Features to Consider

Material & Fire Resistance: Steel construction with flame-retardant layers or powder-coated exteriors for corrosion and fire protection.

High-

Density Support: Adjustable rails, perforated doors, and cable management to maximize rack space. Load Capacity: Static and dynamic load ratings suitable for heavy IT equipment. Certifications: EN, NFPA, FM, Telcordia GR-63-CORE for fire and seismic compliance.

Thermal Management: Perforated doors, fan trays, and airflow pathways to prevent overheating in dense deployments. These cabinets are available in stock from distributors and manufacturers, and many can be customized to meet specific data center or enterprise network requirements. For immediate procurement, contacting suppliers like Legrand, Panduit, or RSP Supply is recommended to confirm availability and fire-rated options.
