How much does a 24-core optical distribution box cost

Overview

24 core optic distribution boxes, close to $1 each, CE certified, FTTH compatible, available from 1 unit. Large volumes available, ideal for resale and distribution.

Key Takeaways

A 24-core optical distribution box typically costs between $20 and $30 per unit for standard models, with bulk orders potentially reducing the price to around $1 per core.

Price Overview

Retail and online stores: Standard 24-core fiber distribution boxes are generally priced around $20–$30 per unit for wall-mounted or pole-mounted models suitable for FTTH and FTTB networks, offering features like fusion splicing, mechanical splicing, and signal distribution. Wholesale or bulk orders: On platforms like Alibaba, prices can drop significantly, with some suppliers offering boxes close to $1 per core, making a 24-core box approximately $24 when purchased in large quantities. Specialized models: Units with additional features such as PLC splitters, IP55 protection, or SC/FC adapters may cost slightly more, depending on the manufacturer and included accessories.

Factors Affecting Cost

Material and durability: Boxes made from high-impact engineering plastics or cold-rolled steel with UV and impact resistance may be priced higher. Installation type: Wall-mounted, pole-mounted, or rack-mounted designs can influence the price. Outdoor-rated boxes with weatherproofing typically cost more.

Included components: Some boxes come with pre-installed splitters, adapters, or pigtails, which can increase the unit cost. Quantity purchased: Bulk orders often reduce the per-unit cost significantly, especially for distributors or resellers.

Summary

For most standard applications, expect to pay $20–$30 per 24-core optical distribution box. If purchasing in bulk or from wholesale suppliers, the cost can be reduced to around $1 per core, making it a cost-effective option for large-scale deployments. Always consider additional costs such as shipping, installation, and optional accessories when budgeting for fiber optic network projects.
