How to apply quotas for existing optical cable bundling

Overview

Quotas_Tags and Quotas_User Guide for Shared Load BalancersQuotas can limit the number of resources available to users, such as the maximum number of ECSs.

Key Takeaways

Applying a quota for bundling optical cables involves defining the maximum number of fibers per bundle, arranging them carefully, and following proper routing and protection practices to ensure performance and safety.

Define the Quota and Bundle Size

Start by determining the maximum number of optical fibers allowed per bundle based on your system requirements, cable tray capacity, or custom application needs. This quota ensures that fibers are not overcrowded, which can cause bending stress, signal loss, or mechanical damage. For custom bundles, quotas can range from a few fibers to several hundred, depending on the application and fiber type.

Organize and Arrange Fibers

Grouping: Divide fibers into manageable groups according to the quota. For example, if a storage device has 20 fibers and the quota is 10 per bundle, create two bundles of 10 fibers each. Patterning: Fibers can be arranged in hexagonal, circular, or rectangular patterns for maximum density, or randomly for flexibility.

Protection: Use corrugated pipes or flexible tubing to protect fibers, and wrap sharp ends with adhesive tape to prevent damage during routing.

Routing and Securing Bundles

Route bundles along cable trays, posts, or brackets inside cabinets or equipment rooms. Avoid excessive bending or pulling; maintain the minimum bend radius specified for the fiber type. Separate bundles to prevent interference or mechanical stress, and evenly distribute them across trays if multiple bundles are routed to the same device.

Labeling and Documentation

Clearly label each bundle with its fiber count, destination, and type to maintain organization and simplify maintenance. Document the bundle arrangement and routing path to ensure compliance with the quota and facilitate future upgrades or troubleshooting.

Custom Bundles for Specialized Applications

For applications requiring precise fiber arrangements, such as spectroscopy or laser systems, you can create custom bundles with specific fiber types, diameters, numerical apertures, and connector types. These bundles can be rigid or flexible, and the number of fibers per bundle can be strictly controlled to meet the quota. By following these steps, you can apply a quota effectively, ensuring optical fibers are bundled safely, routed efficiently, and maintained for optimal performance.

Huawei Technical Support

Find detailed instructions for cable routing and bundling in Huawei''s technical support documentation.

Quickstart: Request a quota increase in the Azure portal

Enter quotas into the search box, and then select Quotas. On the Overview page, select a provider, like Compute or Networking. On the My quotas page, under Quota name, select the

Cable Routing and Bundling Basics

General Cable Operation Guide This document describes the specifications for preparing, routing, and bundling cables and attaching labels to these cables.

Duct Installation of Fiber Optic Cable

To ensure all specifications are met, consult the specific cable specification sheet for the cable you are installing. Corning Optical Communications cable specification sheets are available which list the

System Design Calculators | Corning

This cable and conduit fill ratio calculator helps determine whether selected cables will fit within a given conduit diameter. By calculating the ratio between cable size and conduit capacity, the tool supports

The Complete Guide to Fiber Optic Cable Management

Ultimate fiber optic cable management guide: Best practices for installation, organization & maintenance - ensure network reliability.

Optical Fiber Routing and Bundling

Optical Fiber Routing During the hardware installation, cut the corrugated pipe to the desired length and wrap the sharp ends with adhesive tape to protect the optical fiber. Avoid forcibly pulling or

Optical Fiber/Optical Cables/AOC Routing and Bundling

This section uses the optical fiber as an example to describe how to lay out and bundle cables. The optical cable and AOC differ from the optical fiber only on the connector. For details about optical

Edit Auto Apply Quota Properties | Microsoft Learn

When you make changes to an auto apply quota, you have the option of extending those changes to existing quotas in the auto apply quota path. You can choose to modify only those quotas
