Huawei optical port of Layer 3 switch

Overview

An Ethernet interface works as a Layer 2 interface in Layer 2 mode and a Layer 3 interface in Layer 3 mode.

Key Takeaways

Huawei Layer 3 switches feature all-optical ports for high-speed connectivity, including GE downlink ports and 10GE uplink ports, supporting advanced Layer 3 routing and campus or data center deployment.

Optical Port Overview

Huawei Layer 3 switches, such as the CloudEngine S5736-S and S5735-S-V2 series, are designed as all-optical switches. They typically provide: Downlink optical ports: 24 or 48 Gigabit Ethernet (GE) optical ports for connecting end devices or access switches. Uplink optical ports: 4 x 10GE ports for high-speed aggregation or core network connections.

Stacking ports: Some models include 2 stack ports to interconnect multiple switches for unified management and higher throughput. These optical ports support pluggable SFP/SFP+ modules, allowing flexible deployment with single-mode or multi-mode fiber depending on distance and network requirements. Layer 3 CapabilitiesHuawei Layer 3 switches integrate advanced routing features alongside optical connectivity: Routing protocols: OSPF, IS-IS, BGP, and VRRP for resilient Layer 3 networks.

VLA

N routing: Inter-VLAN routing is supported, enabling communication between different network segments. Multicast support: PIM SM, PIM DM, PIM SSM, and IGMP snooping for video and broadcast traffic. IPv6 support: Mature IPv6 features for modern network deployments.

Deployment Scenarios

These switches are suitable for: Campus networks: As access or aggregation switches connecting multiple VLANs and providing high-speed uplinks. Metropolitan Area Networks (MANs): For high-speed optical access and aggregation. Data centers: As access switches with all-optical connectivity for servers and storage networks.

Additional Features

Right To Use (RTU) licenses: Allow upgrading access ports from GE to 10GE without hardware changes, protecting investment. Telemetry and network analytics: Real-time monitoring via Huawei's CampusInsight or iMaster NCE for proactive fault detection. High reliability: Dual pluggable power supplies and intelligent O&M for continuous operation.

In summary, Huawei Layer 3 switches with optical ports provide flexible, high-speed connectivity with robust Layer 3 routing, making them ideal for enterprise, campus, and data center networks. The combination of all-optical downlink ports, 10GE uplinks, and advanced routing features ensures efficient inter-VLAN communication and scalable network design.
