Cisco Industrial Ethernet Switches

Cisco provides a wide range of industrial Layer 3 switches built for factories, transportation infrastructure, and grid substations. They feature high-speed 10-GE uplinks, PoE options, ultra-low jitter, and advanced security. Cisco switches support industrial AI, software-defined automation, and IT/OT integration, offering resiliency protocols, microsegmentation, and zero-trust remote access.

Models like the IE3500 Rugged Series and Catalyst IE9300 Rugged Series are modular, scalable, and suitable for high-performance industrial networks.

Come-

Star Industrial Layer 3 SwitchesCome-Star switches combine advanced routing with rugged design, supporting static routing, OSPF, VLANs, and QoS prioritization. They operate reliably in extreme temperatures (-40°C to +75°C) and high-vibration environments. Management options include CLI, web interface, and SNMP, making them versatile for factory floors, transportation networks, and utility systems.

These switches are ideal for large-scale, segmented industrial networks requiring high-speed communication and redundancy.

Key Considerations

When selecting an industrial Layer 3 switch, consider: Environmental tolerance: temperature, vibration, and humidity ratingsNetwork protocols: OSPF, VLAN, QoS, multicast supportSecurity compliance: IEC 62443 or other relevant standardsRedundancy and uptime: dual power supplies, failover capabilitiesConnectivity: fiber and Gigabit options, PoE support for devices These switches are suitable for mission-critical industrial networks where reliability, security, and advanced routing are essential.
