Italian tariff cost for 200G optical core router

Overview

Goodada''s Italy customs import and export duty calculator will help you identify the export tariff rates you will pay.

Key Takeaways

High-capacity fiber-optic connections in Italy typically start around €30 per month for consumer-grade FTTH, with enterprise-level 200G optical routers costing significantly more depending on provider and service level.

Consumer and High-

Speed Fiber Pricing

In Italy, the average monthly cost for FTTH (Fiber to the Home) broadband is approximately €26. 57 to €30 for standard high-speed packages, which usually provide speeds up to 1 Gbps. Prices for basic broadband can start as low as €15 per month, while premium unlimited or higher-speed plans may reach €50 or more.

Italian providers such as TIM, Vodafone, Fastweb, WindTre, and Iliad offer a range of packages, with promotions and contract length affecting the final price.

Enterprise and High-

Capacity Connections

For enterprise-grade optical routers capable of 200G throughput, costs are substantially higher than consumer broadband. These services are typically offered as dedicated leased lines or optical transport services rather than standard home broadband. Pricing depends on: Bandwidth and capacity: 200G connections are considered high-capacity and often require specialized equipment.

Installation and setup fees: One-time costs for optical routers and network integration. Service level agreements (SLAs): Higher reliability and guaranteed uptime increase monthly fees. Provider and location: Major providers like TIM and Fastweb offer enterprise solutions with customized pricing.

While exact tariffs for a 200G optical router are not publicly listed, enterprise optical services in Italy can range from several hundred to several thousand euros per month, depending on the configuration and service guarantees. For comparison, consumer FTTH packages are far cheaper, but they do not support 200G throughput.

European Context

Italy is among the cheapest European countries for fiber-optic services, with FTTH costs lower than Germany, France, Spain, and the UK. This trend extends to high-speed enterprise services, where Italian providers often offer competitive pricing relative to other EU markets.

Recommendations

Contact providers directly for a quote on 200G optical routers, as pricing is highly customized. Consider installation and maintenance costs in addition to monthly tariffs. Compare multiple providers to ensure competitive pricing and service quality.

In summary, while standard FTTH broadband in Italy costs around €26–30 per month, a 200G optical router for enterprise use will be significantly more expensive, with costs depending on bandwidth, provider, and service level agreements.
