Large-span cable trays for the Middle East are available in stock

Overview

We are recognized as one of the top Cable Ladder manufacturers in UAE, catering to large-scale industrial and infrastructure projects.

Key Takeaways

High-quality large-span cable trays are available in stock across the Middle East from multiple UAE-based manufacturers and suppliers.

Key Suppliers and Options

West Port Cable Tray offers engineered cable ladders and trays designed for heavy-duty applications and extended spans, ensuring easy cable installation, management, and future modifications. Their products include ladder trays, perforated trays, wire mesh trays, and Unistrut channels, suitable for commercial and industrial projects across the Middle East.

DANA STEE

L manufactures cable trays in stainless steel, mild steel, aluminum, hot-dip galvanized, and powder-coated finishes, supplying UAE, Oman, Saudi Arabia, Kuwait, Bahrain, and Africa. Their trays are suitable for large-span installations and heavy-duty electrical infrastructure. Bonn Metal Construction Industries (BMCI) produces over 12,000 tons of cable management systems annually, including ladder trays, trunking, and strut channels.

BMC

I specializes in industrial and commercial projects, offering solutions for power, signal, control, and communication cables, with stock ready for immediate deployment across the MENA region. Unigroup provides perforated, ladder, and wire mesh cable trays, as well as GRP (Glass Reinforced Polyester) systems. Their trays are engineered for long-term reliability, corrosion resistance, and ease of installation, making them suitable for large-span applications in harsh Middle Eastern climates.

Ruwais Steel supplies a wide range of cable trays, including ladder, perforated, galvanized, stainless steel, and powder-coated options, all manufactured to ISO 9001: 2008 standards. Their products are designed for industrial and construction projects, ensuring durability and compliance with regional environmental conditions.

Considerations for Large-

Span Installations

Material Selection: Stainless steel or hot-dip galvanized trays are preferred for corrosion resistance in humid or coastal areas. Aluminum trays are lighter and easier to handle for very long spans. Tray Type: Ladder trays are ideal for heavy cables and long spans due to their structural rigidity.

Wire mesh trays are flexible and suitable for data or light cabling. Load Capacity: Ensure the tray is rated for the total cable weight and span length. Heavy-duty trays are engineered for extended spans without intermediate supports.

Environmental Factors: Consider UV exposure, temperature extremes, and chemical resistance for outdoor or industrial installations. These suppliers provide ready stock and custom solutions, making it feasible to source large-span cable trays quickly for projects across the Middle East.
