Lebanon Telecom Fiber Optic Cable Failure

Overview

Ogero announced that a fault occurred in major fiber-optic cables in the Bekaa region, leading to a disruption of its services in the area and several neighboring regions, adding that its teams are swiftly working to repair the issue. Fiber to the x (FTTX) is a generic term for any broadband network architecture using optical fiber to provide all or part of the local loop used for last mile telecommunications. As fiber optic cables are able to carry much more data than copper cables, especially over long distances, copper. Nearly two months after the ceasefire took effect in Lebanon, parts of Beirut's southern suburbs remain without internet. The government's management chaos and the lack of effective repair plans have only made matters worse.
