Lifespan of PVC-U cable trays

Overview

Overall Performance: These trays are strong and last a long time because they mix the good points of metal and non-metal. They handle rust better than metal ones. Lifespan (1-2 years to 10 years): Regular galvanized steel trays have a thinner protective coating and are often exposed to corrosion in humid or corrosive. Most power cables have a design life of between 20 to 30 years. Power cables are available with special high-grade XLPE or EPR insulation with design lifetimes of up to 50 years. How do you calculate the. What is the life expectancy of electrical cables?

Cables don't come with an exact life expectancy, and as the material compounds are refined and developed, so the durability extends further. Understanding how long cables last – and what shortens their life – is crucial for safety, cost savings, and reliability. All illustrations, descriptions and technical information included in this document are provided as indications and can cable trays are equivalent.
