Lighting Scheme for Communication Towers

Overview

Owners of towers already constructed can save money while eliminating 70% of bird collisions by extinguishing or reprogramming non-flashing tower lights.

Key Takeaways

Effective communication tower lighting balances aviation safety, regulatory compliance, and environmental protection, using minimal, strategically placed flashing lights and energy-efficient technologies. Key Principles of Tower Lighting Design1. Regulatory Compliance: Towers over 200 ft (≈61 m) generally require obstruction lighting to comply with FAA regulations (AC70/7460-1M) and ICAO Annex 14 standards.

Lighting must ensure visibility to aircraft while minimizing unnecessary illumination. Dual-color systems (white during the day, red at night) are recommended for towers 45–150 m, while high-intensity red lights are used for taller structures. 2.

Light Placement and Intensity: Low-intensity lights are suitable for towers ≤45 m at night. Medium-intensity lights (Type A, B, or C) are used for towers 45–150 m, with Type B optionally combined with other lights for larger structures. High-intensity lights are applied for towers >150 m or when aeronautical studies indicate necessity.

Lights should be arranged to ensure visibility from all azimuth angles, with multiple levels depending on tower height. 3. Flashing vs Steady Lights: Flashing lights are preferred over steady lights to reduce attraction of migratory birds and minimize ecological impact.

Non-flashing red lights at night should be avoided unless required by FAA. Aircraft Detection Lighting Systems (ADLS) can keep towers unlit until aircraft are detected, further reducing light pollution. 4.

Environmental Considerations: Minimizing light is critical to prevent bird collisions, especially in migratory pathways. Motion- or heat-sensitive, down-shielded lighting should be used for ground facilities to reduce constant nighttime illumination while maintaining safety. 5.

Energy Efficiency and Maintenance: LED obstruction lights are recommended for their energy efficiency, low maintenance, and long lifespan. Solar-powered low- or medium-intensity lights can be used for remote towers, reducing operational costs. 6.

Tower Marking and Color: Towers may require painting (red and white stripes) for daytime visibility. Dual-color lighting complements this by providing white lights during the day and red lights at night for aviation safety.

Implementation Strategy

Conduct an aeronautical study to determine minimum required lighting. Use flashing red lights at night and white lights during the day for dual-color systems. Install lights at top, middle, and quarter heights for taller towers to ensure visibility.

Consider ADL

S for towers where FAA permits, reducing unnecessary illumination. Implement motion-sensitive ground lighting for maintenance areas. Regularly maintain and test lighting systems to ensure compliance and functionality.

By integrating these principles, communication towers can achieve optimal safety, regulatory compliance, and environmental stewardship, while minimizing energy use and ecological impact.

PDF file

Recommended Best Practices for Communication Tower Design,

For some towers, the FAA can permit an Aircraft Detection Lighting System (ADLS), which maintains a communication tower of any height to be unlit until the ADLS radars detect nearby aircraft, at which

Obstruction Lights For Telecommunication Towers

Not sure what type of obstruction lights for your towers? Check out REDDOT obstruction lighting solutions for telecom/GSM towers.

Cell Tower Lights | Telecom Obstruction Lights

We''ve been protecting telecom towers since 1970, with over 50,000 cell tower lighting systems installed to date. FAA, ICAO, CAR 621 and DGAC-compliant

Communication towers

Medium intensity lights are suitable to warn the presence of obstacles with an height between 45m to 150m or other obstacles outside the aerodrome movement area.

FAA Tower Lighting Compliance: The Complete Guide

This guide explains everything tower owners need to know about FAA tower lighting compliance, including regulations, inspection requirements, outage reporting rules, and operational

Antenna Tower Lighting and Marking Requirements

With respect to telecommunications towers, the most common option approved by the FAA is the substitution of white flashing lights for a combination of red lights and painting.

FAA Tower Lighting Compliance Guide

The document provides links and information on the requirements for tower lighting as specified by the FAA and FCC regulations. It includes FAA forms, advisory circulars, databases on enforcement

Recommended Best Practices for Communication Tower Design,

Obstruction Marking and Lighting Advisory Circular AC 70/7460-1M. Communication towers are some of the tallest structures across the landscape and birds are regularly found dead around these towers

Recommended Best Practices for Communication Tower Design,

© 2026 BAGYOU FIBRE NETWORKS - All rights reserved

Communication towers are some of the tallest structures across the landscape and birds are regularly found dead around these towers (Longcore et al. 2012a). It is not definitively understood

Communication Tower Lighting Impacts Bird Collisions

New guidelines for communication tower lights spell out how tower operators can reduce bird collisions with their facilities while also saving energy, without sacrificing safety. Put in place by

Tower Lighting FAQs

Tower Lighting FAQs Prioritize safety, compliance, and performance with your lighting solutions We know choosing the right lighting solution can be overwhelming, so we''ve compiled a list of common

Communication Antenna Tower Lighting and Marking

The lighting requirements for communication antenna towers typically include a combination of red and white lights . Red lights are used to

Cell Tower Lights | Telecom Obstruction Lights & Lighting Systems

We''ve been protecting telecom towers since 1970, with over 43,000 cell tower lighting systems installed to date. FAA, ICAO, CAR 621 and DGAC-compliant solutions that you can count on for type A towers

Communication Antenna Tower Lighting and Marking

The use of communication antenna towers has become increasingly important in today''s society. These towers are used to transmit and receive

Obstruction Lights for Telecom Towers

The rapid growth of the cellular phone industry and other communication services has led to millions of new Telecommunication towers being erected all over the world. Since they present hazards in the

Cell Tower Obstruction Light: A Beacon of Safety for

A cell tower obstruction light ensures the visibility of these structures, serving as a warning for aircraft operating at low altitudes. By emitting bright,
