Mali CE Certified Cold Aisle Outdoor Type

Overview

Litech, a leading Malaysia data center manufacturer, offers innovative Cold Aisle Containment Systems as the answer.

Key Takeaways

A CE-certified cold aisle containment system for outdoor use is a modular, energy-efficient solution that isolates cold supply air from hot exhaust air, ensuring optimal cooling and equipment performance.

Overview

Cold aisle containment (CAC) systems are designed to separate cold supply air from hot exhaust air in data centers, creating a controlled environment for IT equipment intake. This separation improves cooling efficiency, reduces energy consumption, and prevents hot spots that can damage servers or reduce performance. For outdoor or semi-outdoor deployments, CE certification ensures the system meets European safety, health, and environmental standards, including structural integrity, electrical safety, and material compliance.

Key Features

Modular Design: Outdoor CAC systems are typically modular, allowing for row-based deployment and easy expansion as data center needs grow. Panels, doors, and frames can be quickly installed or reconfigured. Airflow Management: The system uses doors at aisle ends, ceiling panels, and structural frames to direct cold air precisely to server intakes, preventing mixing with hot exhaust air.

Energy Efficiency: By maintaining a uniform cold aisle temperature, these systems can reduce cooling energy consumption by 20–50%, depending on site conditions and rack density. Energy savings are enhanced when combined with variable-speed fans and proper return air paths. Security and Safety: CE-certified systems include mechanical or sliding doors with locks, clear panels for monitoring, and robust structural frames suitable for outdoor exposure.

Compatibility: Supports standard rack sizes (42U, 45U, 48U) and widths (600 mm or 750 mm), making it compatible with most server cabinets and retrofit projects.

Outdoor Considerations

For outdoor or semi-outdoor installations, additional factors include: Weatherproofing: Panels and doors must resist rain, dust, and UV exposure. Temperature Control: Outdoor CAC may require integration with air conditioning or chilled water systems to maintain consistent intake temperatures. Structural Stability: CE certification ensures the system can withstand wind loads and other environmental stresses typical of outdoor deployment.

Benefits

Improved Cooling Efficiency: Directs cold air to equipment intakes, reducing hot spots and maintaining manufacturer-recommended operating conditions. Energy Savings: Enables higher supply air temperatures, reducing HVAC load and operational costs. Scalability: Modular design allows for phased deployment and future expansion without major infrastructure changes.

Compliance and Safety: CE certification guarantees adherence to European safety and environmental standards, critical for outdoor installations. In summary, a Mali CE Certified Cold Aisle Outdoor Type system combines the energy efficiency and airflow management of traditional cold aisle containment with modular, weather-resistant design suitable for outdoor environments, ensuring both operational reliability and compliance with CE standards.

Cold Aisle Containment

Discover cold aisle containment systems with IP20 protection and modular design for data centers. CE certified, customizable, airtight storage solutions.

Cold Aisle Containment in Data Centers | Subzero

With cooling provided through a raised floor, this cold aisle containment project uses rigid wall panels in conjunction with the Polar Cap 2 roof system to provide

Hot & Cold Aisle Containment Systems For Data

Cool Shield™ containment offers state-of-the-art hot and cold aisle containment solutions designed to maximize data center efficiency while significantly reducing

Data Center Aisle Containment Systems | Profile IT Solutions

Specify complete aisle containment systems for data centers, edge facilities and high-density compute rooms. Compare configurations, build a shortlist and send one project-ready enquiry.

Cold Aisle Containment

Modular designed frame made of cold roll steel, with thickness ≥ 1.2mm to ensure the firmness and security. Aisle containment in the data center requires that

AISLE CONTAINMENT

Hot aisle containment is made from light duty aluminum profile and thermal insulation PC board, has better heat dissipation performance than cold aisle containment in high density data centers, to

Tate Cold Aisle Containment System

A Cold Aisle Containment (CAC) system encloses the cold supply air within the aisle, preventing it from mixing with hot exhaust air. This ensures servers receive a consistent supply of cooled air, improving

Hot/Cold Aisle Containment System

Whether a hot aisle or cold aisle containment system, WANZU can offer a comprehensive design and solution to fit standard and non-uniform hot/cold aisle configurations. Our Hot/Cold Aisle Containment

CONTAINMENT SYSTEM

Cold Aisle drop away ceiling panels (clear or opaque) Class A rated, CA State Fire Marshal, UL & FM Global listed and approved Hot aisle to plenum light-weight cabinet supported vertical panels speed

The Fundamentals of Ce Certification Cold Room: Characteristics ...

A CE certification ensures compliance with European health, safety, and environmental protection standards, making these units suitable for commercial and industrial applications within the EU.

What To Know About Hot-Aisle, Cold-Aisle, And Chimney

This separation of hot and cold can be achieved through either hot-aisle containment, cold-aisle containment, or chimney containment, and it is important for several reasons. For one

Hot/Cold Aisle Containment | Data Center Containment Systems

There are mainly two types of data center containment, hot aisle containment and cold aisle containment. Hot aisle containment encloses warm exhaust air from IT equipment in data center

Aisle Containment Systems for Hot & Cold Aisle Solutions

Cool Shield Aisle containment solutions reduces server row temperatures in active data centers. Learn more about the benefits of hot and cold containment.

Cold Aisle Containment

Cold Aisle Containment or CAC is a proven, relatively easy to deploy solution for effectively managing airflow within a data centre. A CAC system surrounds the

Aisle Containment

Improve your data center''s cooling and efficiency with our cold aisle containment integral roof. This solution prevents hot and cold air mixing, increasing your

Cold Aisle Containment | Legrand

Cold aisle containment creates an enclosed corridor in front of server cabinets, ensuring that the coldest air goes directly into equipment intakes. By isolating the cold aisle, containment reduces unintended
