Microcomputer-based Multifunctional Relay Protection Tester

Overview

LND-802 Microcomputer Relay Protection TesterIt can test not only various traditional relays and protection devices, but also various modern microcomputer.

Key Takeaways

Microcomputer-based multifunctional relay protection tests are advanced procedures using digital relay testers to ensure the accuracy, reliability, and safety of power system protection devices. OverviewMicrocomputer-based relay protection tests are designed to evaluate the performance of protective relays in electrical power systems. These tests verify that relays operate correctly under various fault conditions, ensuring the safety and stability of the power grid.

Modern testers integrate digital signal processing (DSP), field-programmable gate arrays (FPGA), and high-precision DACs to simulate real-world electrical conditions and measure relay responses accurately.

Key Functions

These multifunctional tests typically include: AC/DC Current and Voltage Testing: Simulates normal and fault conditions for relays, including small and large currents with high stability. Differential and Distance Protection Testing: Evaluates transformer differential protection, line protection, and impedance-based relays. Fault Recurrence and Harmonic Testing: Reproduces fault waveforms and harmonic distortions to assess relay performance under complex conditions.

Synchronization and GPS-based Testing: Allows simultaneous testing of multiple devices in different locations using GPS synchronization. Metering and Excitation Tests: Checks accuracy of metering relays and excitation control systems. Automatic and Manual Test Modes: Provides flexibility for laboratory or field testing, with PC control software for data logging and report generation.

Technical Features

Modern microcomputer relay testers, such as the Test-330, LND-802, and TEST-630, offer: Multi-phase current and voltage outputs (3–6 phases) with high precision and linearity. Embedded industrial computers with user-friendly interfaces, TFT displays, and optional laptop connectivity. High-frequency output capability (up to 1050 Hz) for advanced testing scenarios.

Hardware redundancy and software self-calibration to improve reliability and reduce failure rates.

US

B or RS232 interfaces for easy data transfer and integration with PC software.

Reliability and Improvement

Reliability is critical in relay protection testing. Studies show that hardware redundancy, software optimization, and staff training significantly improve the detection rate of relay failures, enhancing the safety of the power system. Regular testing with multifunctional relay testers helps identify weak points, prevent sudden power failures, and ensure compliance with standards such as DL/T624-1997 and DL/T624-2010.

ApplicationsMicrocomputer-based relay protection tests are widely used in: Substations for commissioning, maintenance, and acceptance testing. Industrial power systems including petrochemical, metallurgy, railway, and aviation sectors. Research and development for new relay designs and protection schemes.

Selection Considerations

When choosing a relay protection tester, consider: Technical performance: selectivity, speed, sensitivity, and reliability. Functionality: ability to test specific relay types and operate independently or with PC software. Application needs: line protection, transformer differential protection, excitation control, etc.

Brand and after-sales support: ensures quality, technical support, and software updates. Microcomputer-based multifunctional relay protection tests are essential tools for ensuring accurate, reliable, and safe operation of modern power systems, combining advanced electronics, software, and testing methodologies to meet the demands of complex electrical networks.

Article Content

LND-802 Microcomputer Relay Protection Tester

It can test not only various traditional relays and protection devices, but also various modern microcomputer protections, especially for transformer differential

What Is a Microcomputer Protection Relay Tester and How Does

A microcomputer protection relay tester is an electronic device designed to test digital and microprocessor-based protection relays. It generates simulated electrical signals replicating fault

Auto Relay Tester Microcomputer Protection Relay Test Set

Not only test the traditional relays and protectors, but also test the modern microcomputer relays, special for transformer differential protection and transfer equipment.

Microcomputer relay protection tester

Simply put, a microcomputer relay protection tester is a professional instrument used to test the functionality, performance, and accuracy of relay protection devices.

Relay protection tester,microcomputer relay protection tester,relay ...

Equipped with advanced DSP technology, a high-fidelity linear amplifier, and multiple digital interfaces, it ensures reliable, efficient, and automated protection system calibration. Compact and portable, it''s

TEST-630 SIX PHASE MICROCOMPUTER PROTECTION RELAY

TEST-630 protection relay tester is a relay test equipment which offers all the characteristics and functions needed for protective relay testing, in a manual or automatic mode, designed for using on

Relay Testers | sisco

Protection relay tester can be used to verify various relays and microcomputer protections, and can simulate a variety of complex transient, permanent, and conversion faults for the entire set of tests.

What is a microcomputer relay protection tester and its significance?

The microcomputer relay protection tester can manually or automatically test various types of voltage, current, frequency, power, impedance, harmonics, differential, synchronous relays, etc.

3 Phase Microcomputer Protection Relay Test Device

© 2026 BAGYOU FIBRE NETWORKS - All rights reserved

The tester can not only test traditional relays and protective devices, but also test modern microcomputer-based protective devices, especially the differential

(PDF) Design and Implementation of Multifunction Relay Based on ...

The setting of the multi-function relay configuration done using a new design based on the MATLAB GUI environment. Furthermore, the results obtained after each test appear on it and

TEST-330 THREE PHASE MICROCOMPUTER PROTECTION RELAY TEST

This model relay test equipment can independently finish device test in professional fields of microcomputer protection, relay protection, excitation, metering, fault recording, etc. and is widely

Protection Relay Tester

Smart Multi-phase Relay Protection Tester is a new generation of intelligent relay protection test equipment for Substation ABB, Siemens, SEL, Schneider, NR microcomputer protection device etc.

LND-802 Microcomputer Relay Protection Tester

The test is more convenient and perfect. 2.All kinds of technical indexes fully meet the standard of DL / t624-1997 "technical conditions for microcomputer based

Microcomputer 3 Phase Secondary Current Injection Relay Protection Tester

HZJB-340A Microcomputer Relay Protection Tester is a new,compact microcomputer relay protection tester developed by extensively consulting user feedback and summarizing the advantages and

Reliability Analysis and Improvement Strategies of Microcomputer Relay ...

The research results of this paper will greatly improve the adaptability and reliability of microcomputer-based relay protection and promote the scientific and technological progress and

Functional Testing of Microcomputer Protection Devices: Verifying ...

For testing high-voltage microcomputer protection devices, it is recommended to use a microcomputer relay protection tester capable of simultaneously outputting three-phase voltage and three-phase

Microcomputer Three Phase Relay Protection Tester –

Microcomputer Three-Phase Analog and digital device for relay protection testing with high accuracy, supports various phase current and voltage channels.

Single phase microcomputor protection relay test set

© 2026 BAGYOU FIBRE NETWORKS - All rights reserved

TEST-750 single phase relay test set is a portable relay test unit, high performance, operation simply, portable designed to test in the field; It adopts aluminum alloy body with PC panel, robust shape;
