Optical cable pre-twisted wire installation direction

Overview

If you are installing cable of lengths 40m or longer, use a “figure 8" on the ground to prevent twisting (the figure 8 puts a half twist in on one side of the 8 and takes it out on the other, preventing twists. Lay cable on floor in a figure 8 pattern. OPGW is usually installed on the top of pole of the electric power aerial wire. The following operation caused by temperature, and possible thunder attack, short circuit ere. Therefore, detailed conditions. According to design requirement, OPGW should be allotted correctly; every tray of optical. The information contained in this manual should serve as a guide to proper handling, installing, testing, and for troubleshooting problems with fiber optic cables. Installation guidelines regarding minimum bend. Describe the system used for installation and delivery of OPGW fibre optic cables.
