# Order of wiring colors in the distribution box

## Overview

These 3 phase wire color code schemes ensure correct installation, proper phase rotation, and compliance with electrical codes.

## Key Takeaways

Wiring in a distribution box should be sorted by function using standardized color codes, with clear labeling for safety, maintenance, and compliance. Standard Wiring Color CodesAC Wiring (IEC/European Standard): Protective Earth (PE): Green with yellow stripeNeutral (N): BlueLine/Phase (L1, L2, L3): Brown, Black, Grey for three-phase systemsSingle-phase Line: Brown Older UK/EU systems may use red for line, black for neutral, and green/yellow for earth, so always verify before connecting.

A

C Wiring (US NEC Standard): Ground: Green or bare copperNeutral: White or greyHot/Line: Black, red, or blue for multiple phasesHigh-leg delta phase: Orange (if present) For DC systems, red is typically positive and black negative. Sorting Wires in a Distribution BoxOrganize by Function: Incoming feeders and main protection devices (MCBs, fuses) at the topOutgoing circuits in the middleControl and relay assemblies at the bottomLeave space for test instruments and future expansion. Use Terminal Blocks and Labels: Map each conductor to a terminal numberInclude wire ferrule references and color codesLabel each wire clearly to prevent miswiring and simplify maintenance.

Routing and Safety: Separate power and control cablesMinimize sharp bendsUse cable ties, conduit entries, and grommets to maintain neatness and airflowMaintain consistent conductor cross-sections and follow ampacity ratings. Documentation: Maintain wiring diagrams with component identifiers, terminal numbers, and protective device settingsUse CAD templates or 3D cabinet views to validate clearances and heat dissipation.

### Best Practices

Always verify wire function with a multimeter before touching, especially in older installations.

### Follow IE

C 60446 or local electrical codes for color coding and terminal identification. Keep consistent labeling and color sorting across all distribution boxes to reduce errors and improve safety. For mixed old and new wiring, use labels or colored tape to identify wires clearly.

By adhering to these standards and practices, distribution box wiring becomes safer, easier to maintain, and compliant with international or regional electrical codes.
