Phase Wire Optical Cable Applications

Overview

Applied in tubes, ducts, trays, blocks, tunnels, collecting channels, with no risk of rodent attacks. Also applied for aerial installation between supports and buildings on external strength members or using the winding method. Optical Phase Conductor (OPPC) is used as an alternative telecommunications solution when there is no existing. OPPC is a new type of special electrical cable that makes up the unit of fiber in the phase with the function of phase and communication. For the low and medium voltage power network. OPPC stands for Optical Phase Conductor, also known as Optical Fiber Composite Phase Wire. OPPC cables are primarily used in voltage levels below 110kV, such as suburban distribution netwo ks and rural.
