Price of 200G optical receiver

Overview

200G/400G/800G Optical Transceiver Modules | FiberMall200G/400G/800G optical module features up to 40km transmission distances using QSFP56/QSFP-DD footpri.

Key Takeaways

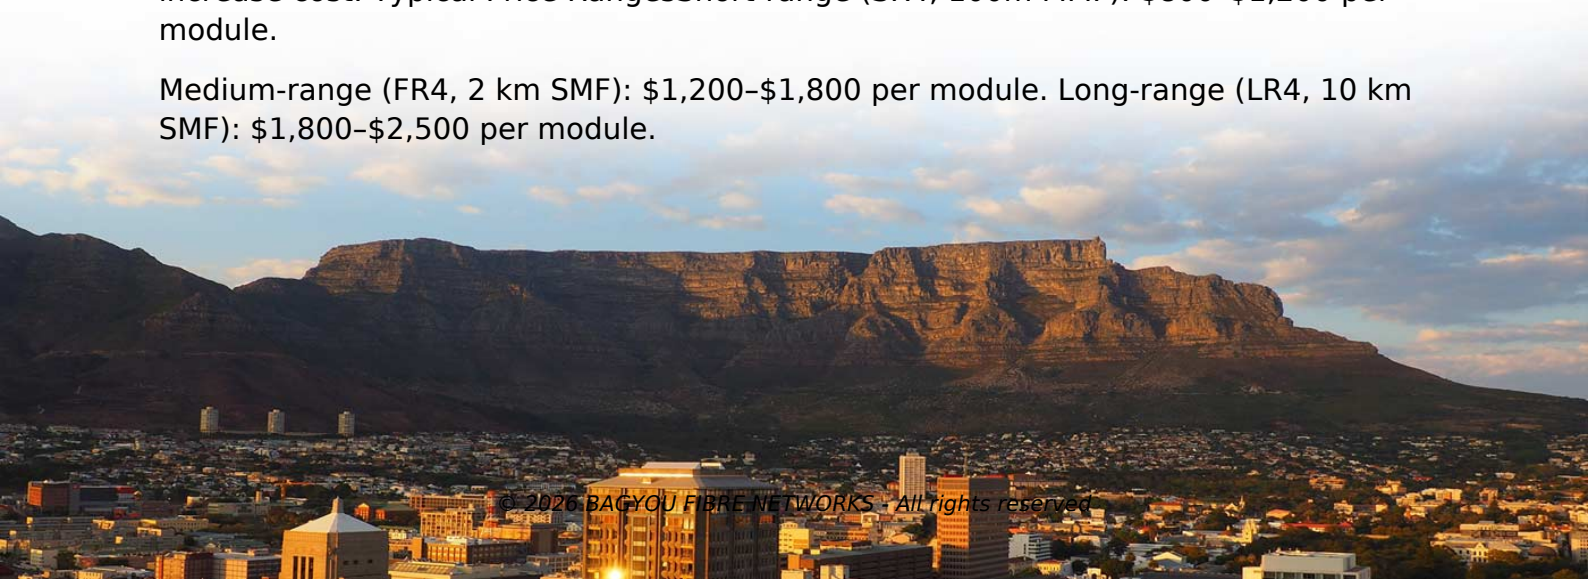

The price of a 200G optical receiver typically ranges from $800 to $2,500 per module, depending on type, distance, and manufacturer.

Overview200

G optical receivers, such as QSFP56 SR4, FR4, DR4, and LR4 modules, are high-speed transceivers used in data centers, cloud networks, and 5G infrastructure. Prices vary significantly based on: Form factor: QSFP56 modules are generally less expensive than QSFP-DD modules due to simpler design. Transmission distance: Short-range multimode modules (SR4, up to 100m) are cheaper, while long-range single-mode modules (FR4, LR4, up to 2–10 km) cost more.

Manufacturer and brand: Leading vendors like Huawei, InnoLight, and Coherent may charge premium prices, while third-party suppliers offer more competitive rates. Special features: Enhanced versions with liquid cooling or advanced FEC support can increase cost. Typical Price RangesShort-range (SR4, 100m MMF): $800–$1,200 per module.

Medium-range (FR4, 2 km SMF): $1,200–$1,800 per module. Long-range (LR4, 10 km SMF): $1,800–$2,500 per module.

Market Trends

The 200G optical module market is growing rapidly, driven by data center expansion, 5G deployment, and cloud computing demands. Market value was $2. 625 billion in 2024 and is projected to reach $4.

991 billion by 2032, reflecting a CAGR of 9. 9%. This growth is contributing to increased availability and competitive pricing, especially for standard QSFP56 modules.

Conclusion

For a 200G optical receiver, expect to pay $800–$2,500 depending on the module type, distance, and vendor. Short-range SR4 modules are the most cost-effective, while long-range LR4 or FR4 modules command higher prices. For precise pricing, contacting suppliers like HEYOPTICS, Gearlink, or HRI Connect is recommended.
