Price of Japanese Fire Protection Cable Trays

Overview

Cable trays are intended for the construction of fire-resistant cable paths. Do you need help with your purchase?

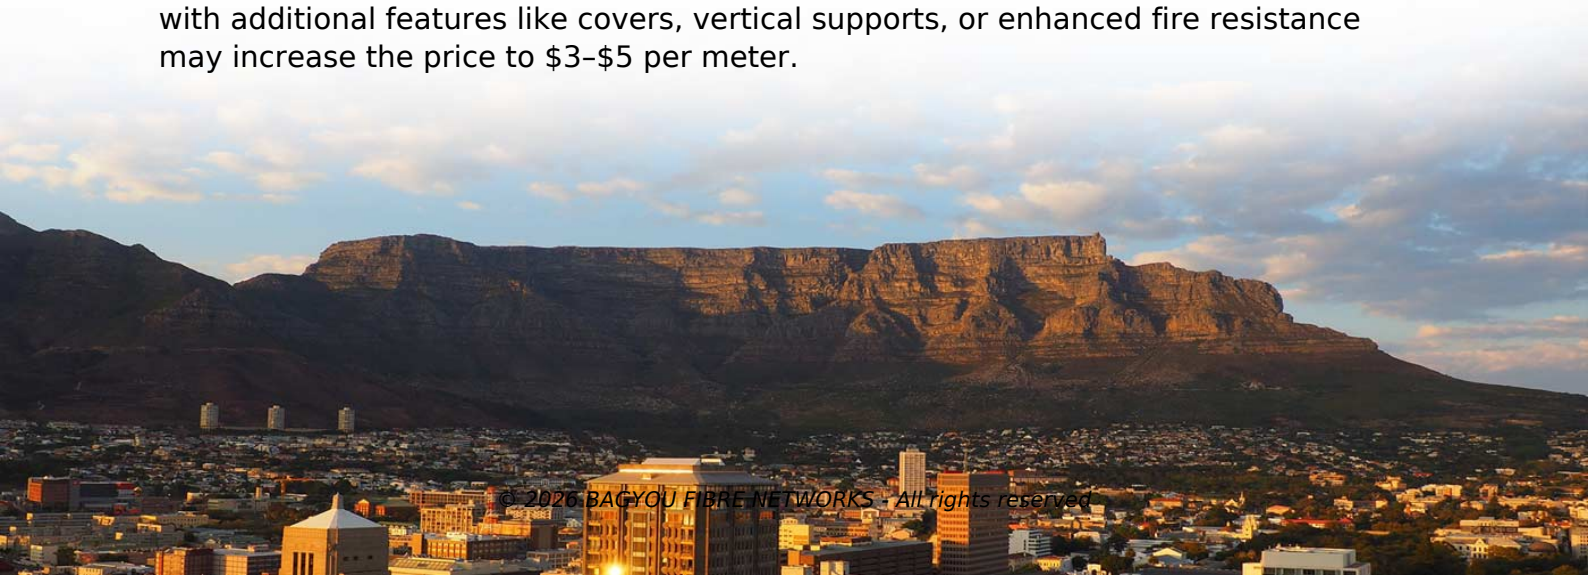

Key Takeaways

Professional fireproof cable trays typically range from $0. 65 to $5 per meter depending on material, type, and order volume.

Overview of Fireproof Cable Tray Pricing

The cost of fireproof cable trays varies significantly based on material, design, and supplier. Common materials include galvanized steel, stainless steel, aluminum, and fiberglass-reinforced polymer (FRP). Steel trays are generally more affordable and robust, while FRP trays offer corrosion resistance and lighter weight but can cost 30% more upfront than steel for similar lengths and fire ratings.

Wholesale prices for industrial-grade trays, such as the Fireproof T3 Cable Tray, start around $0. 65 per meter for bulk orders exceeding 10,000 meters, with premium options for specialized applications or high-load capacities. Smaller orders or trays with additional features like covers, vertical supports, or enhanced fire resistance may increase the price to $3–$5 per meter.

Factors Affecting Price

Material Type: Steel is cost-effective and strong; FRP or stainless steel is more expensive but offers chemical and corrosion resistance. Fire Resistance Rating: Trays certified for 90–120 minutes of fire integrity at high temperatures (e.g., 900°C) may command higher prices. Tray Type: Ladder, solid-bottom, trough, or molded trays differ in complexity and cost.

Ladder trays are common for heavy-duty applications, while molded trays are designed for extreme fire resistance. Order Volume: Bulk purchases reduce per-meter costs significantly, while small-scale or custom orders increase unit prices. Supplier and Certification: Japanese or international suppliers with UL, BS, or EN certifications may charge a premium for compliance and quality assurance.

Sourcing Options

While specific Japanese professional tray prices are not listed, suppliers like Shanghai Qiongkai Industry Co., Ltd. and other industrial manufacturers provide high-quality fireproof trays suitable for professional use, often shipped internationally. For Japanese-specific products, contacting local distributors or certified Japanese manufacturers is recommended to obtain accurate quotes based on project specifications, fire ratings, and material preferences.

Recommendation

For budgeting purposes, expect $0. 65–$5 per meter for professional fireproof cable trays, with higher-end options for specialized materials, certifications, or small orders. Always verify fire resistance ratings, load capacity, and compliance certifications before purchase to ensure safety and regulatory adherence.
