Remove the fiber optic cable from the router

Overview

This guide outlines proper methods to safely remove fiber optic cable from modems in your home or office.

Key Takeaways

To safely remove a fiber optic cable from your router, power down the device, identify the connector type, gently release the locking mechanism, and pull the connector straight out without bending the cable.

Step-by-

Step Instructions1. Power Down the Router: Turn off your router or modem and unplug it from the electrical outlet. This prevents exposure to infrared laser light and protects internal components from damage or electrical hazards.

2. Clear the Workspace: Ensure the area around your router is clean and free of dust or clutter. Even microscopic particles can damage the fiber tip and degrade signal quality.

3. Identify the Connector Type: Common fiber optic connectors include SC, SC/APC, LC, ST, and FC.

S

C connectors are rectangular with a push-pull latch, while LC connectors are smaller with a clip or latch that must be squeezed. Knowing the type helps you release it correctly. 4.

Handle the Cable Carefully: Fiber optic cables are delicate. Avoid bending, twisting, or pulling on the cable itself. Always handle the connector body, not the thin fiber jacket.

5. Release the Locking Mechanism: For SC connectors, depress the small plastic tab on top of the connector until it disengages.

For L

C connectors, squeeze the plastic clip inward toward the connector body. 6. Remove the Connector: Once the lock is released, pull the connector straight out along its axis.

Do not apply lateral force or twist, as this can damage the fiber. 7. Protect the Exposed Fiber End: Immediately cover the exposed fiber tip with the supplied dust cap or a clean protective cover.

If a cap is unavailable, place it in a clean plastic bag or wrap it with clean tape to prevent contamination. 8. Inspect Before Reconnecting: After removal, check the fiber and connector for any visible damage or dirt.

Cleaning may be necessary before reconnecting to maintain optimal signal quality. 9. Seek Professional Help if Needed: If the connector is stuck, damaged, or recessed, contact your ISP or a certified technician to avoid breaking the fiber.

By following these steps, you can safely remove a fiber optic cable from your router while minimizing the risk of damage to the cable, connectors, or your equipment.
