

Samoa High Voltage Distribution Box Processing Point

Overview

This has included construction of 16 transmission and distribution subprojects to improve reliability of the network, reduce system losses, and expand the grid.

Key Takeaways

Samoa uses ZBW-type prefabricated high-voltage distribution boxes that integrate transformers, switchgear, and metering devices for safe and efficient power distribution.

Overview

The ZBW-type prefabricated substation is a complete distribution unit designed for urban, industrial, and infrastructure applications in Samoa. It combines high-voltage switchgear, distribution transformers, low-voltage switchgear, electric energy metering devices, and power factor compensation devices into one or multiple boxes according to specific wiring schemes, making it suitable for centralized or decentralized power distribution points.

Technical Specifications

Transformer rated capacity: 50 kVA to 1600 kVA, supporting a wide range of load requirements. Rated frequency: 50 Hz, compatible with Samoa's standard grid frequency. Protection level: IP23D, ensuring safety against dust and water ingress.

Structural features: Welded channel steel base frame for high strength and rigidity; enclosure made of composite materials with strong radiation resistance to reduce solar heat impact.

Installation and Environmental Requirements

Ground pressure tolerance: Up to 20 tons. Altitude: Suitable for locations ≤ 1000 meters. Ambient temperature: -25°C to 40°C .

Relative humidity: $\leq 90\%$ (monthly average at 25°C). Wind speed: Up to 34 m/s. Ice thickness: ≤ 20 mm.

Pollution level: II or III. Installation location: Areas free from fire, explosion, severe pollution, chemical corrosion, or intense vibration; ground slope $\leq 5\%$. Integration with Samoa's Power Grid These distribution boxes are part of Samoa's broader transmission and distribution upgrade, which includes: Replacement and upgrade of low-voltage distribution lines (1,220 km on Upolu and 800 km on Savaii) Construction and upgrade of substations such as Fiaga, Fuluasou, Salelologa, and Tanugamanono Installation of SCADA monitoring systems for real-time grid management Integration with 22 kV and 33 kV transmission lines to improve reliability and reduce system losses.

Advantages

Short installation cycle and compact footprint, allowing deployment close to load centers. Safe and reliable operation with integrated protection and metering. Aesthetic design with harmonious color and appearance suitable for urban and industrial environments.

Flexibility to accommodate different transformer capacities and wiring schemes. These ZBW-type prefabricated substations serve as the processing points for high-voltage distribution, efficiently stepping down voltage for local consumption while ensuring safety, reliability, and ease of maintenance in Samoa's power network.
