Secondary distribution box construction site specific yellow

Overview

Yellow Secondary Construction Site Distribution Box with Scaffolding. Yellow Secondary Construction Site Distribution Box with Scaffolding IP44 Protectio.

Key Takeaways

Yellow secondary distribution boxes for construction sites provide safe, portable, and durable power distribution for tools and equipment.

Overview

Secondary distribution boxes, often yellow for high visibility, are designed to distribute electrical power safely on construction sites. They are typically used to connect multiple devices to a single power source, ensuring reliable and organized power management for temporary or mobile setups.

Key Features

Durable Construction: Made from thermoplastic or steel, these boxes are resistant to impact, weather, and UV exposure, ensuring long-term use on rugged construction sites. Portability: Many models include handles, wheeled carriages, or tripod stands, allowing easy relocation across the site. Socket and Module Options: They can house multiple interlocked socket-outlets (up to 12) or DIN modules (up to 60), with options for pre-wired versions including fuses or miniature circuit breakers.

Safety Features: Equipped with residual current circuit breakers (30 mA), emergency push-buttons, lockable doors, and steel cable-fastening hooks to prevent accidental contact and ensure compliance with safety standards. Customization: Some suppliers offer custom configurations to meet specific site requirements, including combinations of domestic and industrial sockets.

Applications

Construction Sites: Powering mobile tools, lighting, and temporary equipment. Events and Temporary Installations: Providing reliable multi-device connections. Industrial and Mining Sites: Withstand harsh environments while maintaining safety and efficiency.

Standards and Compliance

Many yellow distribution boxes meet EN62208 standards for impact and UV resistance. Wired versions often include circuit protection and are designed for temporary or mobile use, ensuring compliance with construction site electrical safety regulations.

Examples16

A 4-Way Yellow Distribution Box: Compact, durable, suitable for multiple devices on construction sites. Q-BOX ACS Boards: Mobile, transportable boards with up to 12 socket-outlets or 60 DIN modules, pre-wired options, and emergency safety features. Tripod Steel Stand Boxes: Customizable, ISO9001-certified, suitable for heavy-duty site applications.

These yellow secondary distribution boxes are essential for safe, efficient, and flexible power distribution on construction sites, combining visibility, durability, and compliance with safety standards.
