Secondary distribution box switch model

Overview

Secondary unit substations requiring a primary disconnect are furnished with Eaton''s Type MVS metal-enclosed load interrupter switchgear assemblies.

Key Takeaways

Siemens 8DJH and ABB medium-voltage switchgear are widely used models for secondary distribution up to 24 kV, offering compact, maintenance-free, and flexible solutions for indoor installations. Siemens 8DJH SwitchgearThe Siemens 8DJH is a 3-pole, metal-enclosed, single-busbar switchgear designed for indoor secondary distribution applications, including renewable energy plants, industrial facilities, and urban substations. Key features include: Voltage Rating: Up to 24 kV, with options for 32 kV/60 kV or 42 kV/75 kV depending on national requirements.

Insulation: SF6 gas-insulated, hermetically sealed for life, allowing compact dimensions and protection against humidity and pollution. Protection & Safety: IP65 for high-voltage parts, IP2X for the enclosure, capacitive voltage detection, and mechanical interlocks to prevent maloperation. Maintenance: Maintenance-free under normal indoor conditions; installation, operation, and extension can be performed without SF6 gas work.

Flexibility: Panels can be lined up or extended; instrument transformers and auxiliary devices are accessible outside the primary enclosure. Service Life: 40–50 years, limited by the number of operating cycles of the installed switching devices. Optional Features: Low-voltage compartments, numerical multifunction protection relays, and earthquake resistance.

B Secondary Distribution SwitchgearABB offers medium-voltage switchgear for secondary distribution up to 24 kV, suitable for urban areas where space is limited. Key characteristics include: Design Options: Modular air-insulated switchgear (AIS) and compact gas-insulated switchgear (GIS) for secondary distribution. Applications: Industrial, commercial, and utility networks, connecting medium-voltage primary networks to low-voltage end users.

Standards Compliance: IEC-compliant, ensuring safety, reliability, and interoperability. Installation: Indoor installations with single busbar or back-to-back double busbar arrangements. Digital Tools: ABB provides product configurators and digital tools for selecting appropriate switchgear models.

Comparison and Selection Considerations

Space Constraints: Gas-insulated switchgear (Siemens 8DJH or ABB GIS) is ideal for compact urban substations. Maintenance: Both Siemens 8DJH and ABB GIS models are designed for minimal maintenance, with sealed enclosures and accessible auxiliary devices. Flexibility: Modular designs allow easy extension and integration with process control systems.

Safety: High protection ratings, mechanical interlocks, and voltage detection systems ensure safe operation. For secondary distribution applications, Siemens 8DJH and ABB medium-voltage switchgear represent reliable, long-life solutions with flexible configurations, suitable for industrial, commercial, and urban utility networks.
