Single-sided operation distribution box

Overview

A Single-sided distribution cabinet is an electrotechnical device designed for receiving, distributing, and protecting electrical power in low- and medium-voltage networks. A distribution box is a low-voltage electrical enclosure that receives incoming power and distributes it safely to multiple outgoing circuits through protective and switching devices such as MCBs, RCDs, RCBOs, fuses, isolators, busbars, neutral bars, earth bars, and surge protective devices. The are available in DIN-rail designs for indoor applications. Features ○Made out of high quality. The range of applications extends from pure energy distribution in buildings to building automation and through to industrial plants. SMART DISTRIBUTION BOXES FOR FLEXIBLE BUILDINGS. This variety allows any engineering project to create solutions capable of meeting any field need.
