Specifications and Models of Multi-hole Steel Cable Trays

Overview

Each catalog contains detailed specifications, surface treatments, dimensions, and application cases.

Key Takeaways

Multi-hole steel cable trays are robust, perforated systems designed for efficient cable management, offering corrosion resistance, load-bearing capacity, and compliance with international standards. Material and FinishMulti-hole steel cable trays are typically manufactured from high-strength steel, including pre-galvanized, hot-dip galvanized, or stainless steel (grade 316L), providing excellent corrosion resistance and mechanical strength. Stainless steel variants often include chromium and molybdenum to enhance resistance to chlorides and harsh environments.

Finishes are selected based on environmental conditions, with galvanization being a cost-effective method for protecting steel against corrosion.

Dimensions and Design

© 2026 BAGYOU FIBRE NETWORKS · All rights reserved

Depth: Commonly ranges from 12 mm to 50 mmWidth: Typically 50 mm to 900 mmHole Pattern: Perforated or multi-hole designs allow ventilation, heat dissipation, and cable securingRung Spacing: Recommended 150–230 mm (6–9 inches) for proper cable support and to maintain minimum bend radius Multi-hole trays are designed to support numerous small instrumentation and control cables while minimizing heat buildup. They can be equipped with solid or ventilated bottoms depending on the application requirements. Load Capacity and PerformanceMulti-hole steel trays are engineered to handle light to heavy-duty loads, depending on the series and thickness of steel used.

They are tested for mechanical strength, deflection, and compliance with NFPA 70, NEMA VE 1, and BS EN 61537 standards. Accessories such as bends, tees, and connectors are integrated to maintain structural integrity and ease of installation.

Installation and Accessories

Supports: Trays are mounted using brackets, hangers, or threaded rods to maintain alignment and spacingCovers: Optional solid covers provide additional protection against dust, debris, and electromagnetic interferenceCompatibility: Designed to integrate with ladder, channel, and wire mesh trays for flexible cable routing Standards and ComplianceMulti-hole steel cable trays conform to international standards including NFPA 70, NEMA, UL, and CE marking for safety, fire resistance, and electrical performance. They are suitable for industrial, commercial, and instrumentation applications, ensuring reliable cable management and long-term durability.

SummaryMulti-hole steel cable trays offer a versatile, durable, and corrosion-resistant solution for cable management. They are available in a range of materials, finishes, and sizes, with perforations that enhance ventilation and cable support. Compliance with international standards ensures safety and performance, while accessories and installation options provide flexibility for complex electrical systems.

Delivering engineered solutions in cable management ABB manufacturers a comprehensive range of cable tray systems and solutions including cable ladder, perforated tray, channel tray and metal

Cable Tray Technical Guide A practical guide to product selection and ...

Cable tray is considered to be a system. It must provide continuous support for cables, and the electrical continuity of the cable tray system must be maintained.

CABLE TRAY

We manufacture a wide range of products capable of providing the characteristics which respond to the proposed application, along with quality of assembly, speed of installation, and cost-saving cable trays.

26 05 36 Cable Trays for Electrical Systems

Description: This product category covers metal cable trays and metal cable tray systems intended for field assembly and for use in accordance with Article 392 of NFPA 70.

Cable Tray Systems | Cable Management Trays | Metsec

Our Cable Tray Systems and cable management trays offer high quality steel and galvanised steel solutions for the mechanical and electrical services industries.

Full cable tray systems specification document

The drawings which constitute a part of these specifications indicate the general route of the cable tray systems. Data presented on these drawings is as accurate as preliminary surveys and planning can

Cable Trays and Accesories
