Standard Height Dimensions of In-House Distribution Boxes

Overview

This document provides specifications for various types of plastic distribution boxes, including their dimensions and features.

Key Takeaways

Indoor distribution boxes are typically installed at a height of 1 to 1. 8 meters from the floor, with specific box dimensions varying by series and capacity.

Recommended Installation Height

For residential and in-house applications, distribution boxes should be mounted so that the bottom edge is generally 1. 5 meters from the floor, with the overall height ranging from 1 to 1. 8 meters to ensure accessibility for operation, maintenance, and inspection.

A suggested height of 1. 3 meters is recommended for elderly or handicapped users. Wall-mounted boxes should be positioned 4.

5 to 5. 5 feet (1. 4 to 1.

7 meters) high to avoid bending or stretching excessively and to protect against water spills or accidental impacts. Outdoor boxes should be at least 3 feet above ground, and ground-mounted boxes should be raised 2 to 4 inches to prevent moisture damage.

Standard Box Dimensions

Indoor distribution boxes come in various sizes depending on the series and capacity: Plastic MB-ABC Series: Length 200–328 mm, Width 172–174 mm, Height 95 mm. Indoor steel LSA-PLUS® Series: Boxes like 510, 520, 530, and 540 support 340 to 1340 pairs, with removable lockable doors and IP20 protection. Other series (HA, HK, LGD): Length 100–415 mm, Width 105–323 mm, Height 75–140 mm.

These boxes are designed to comply with BS EN60439-3, JB/T7121-93, and other relevant standards, ensuring flame resistance, insulation, and safe operation.

Compliance and Safety Considerations

Standards: BS 7671 and IEC 60364-5-52 require distribution boxes to be readily accessible and installed in areas free from water, dust, or other hazards. Clearance: Adequate working space must be provided around the box for safe access. Installation Quality: Boxes must be level and stable, with permissible vertical deviations of 1.
