UV Spectrophotometer

Overview

Ultraviolet–visible spectrophotometry (UV–Vis or UV-VIS) refers to absorption spectroscopy or reflectance spectroscopy in part of the ultraviolet and the full, adjacent visible regions of the electromagnetic spectrum. Being relatively inexpensive and easily implemented, this methodology is widely used in diverse applied and fundamental applications. The only requirement is that the sample absorb in the UV–Vis region, i.

Key Takeaways

A UV spectrophotometer is an analytical instrument that measures the absorption of ultraviolet light by a sample to analyze its chemical composition and concentration.

Principle of Operation

A U

V spectrophotometer works on the principle of absorption spectroscopy, where light in the ultraviolet (UV) range (typically 190–400 nm) is absorbed by molecules, causing electrons to transition from a lower energy state to a higher energy state. The instrument measures the intensity of light before and after passing through a sample, allowing calculation of absorbance using the Beer-Lambert law, which relates absorbance to concentration and path length.

Components

Key components of a UV spectrophotometer include: Light Source: Commonly a Hydrogen-Deuterium lamp for UV and a Tungsten lamp for visible light. Monochromator: Disperses light into specific wavelengths using prisms or diffraction gratings. Sample Holder (Cuvette): Typically made of quartz or silica, as glass absorbs UV light.

Detector: Photocells or photodiodes measure transmitted light intensity. Amplifier and Display: Converts detector signals into readable absorbance or transmittance values. TypesUV spectrophotometers can be single-beam or double-beam.

Double-beam instruments compare the sample and reference simultaneously, improving accuracy and reducing errors from light source fluctuations. ApplicationsUV spectrophotometers are widely used in various fields: Chemical Analysis: Identifying compounds and studying molecular structures. Pharmaceuticals: Quality control, purity assessment, and monitoring reactions.

Biochemistry: Measuring nucleic acids, proteins, and enzyme kinetics. Environmental Science: Detecting pollutants and monitoring water quality. Industrial Applications: Color measurement, monitoring conformational changes in proteins, and reaction progress analysis.

AdvantagesNon-destructive and versatile. Can analyze liquids, solids, powders, and thin films. Provides both qualitative and quantitative data.

Rapid and cost-effective for routine laboratory analysis.

Practical Considerations

Proper calibration is essential for accurate results. Sample preparation and cuvette selection affect measurement reliability. Some instruments allow temperature control or fiber optic probes for in situ measurements.

In summary, a UV spectrophotometer is a powerful, precise, and versatile tool for analyzing the interaction of UV light with matter, providing critical insights into chemical composition, concentration, and molecular behavior.

UV-Vis Spectrophotometer: Principle, Components, Uses

UV-Vis spectrophotometry is a sophisticated analytical method for measuring light absorption across the ultraviolet (UV) and visible (Vis) ranges of the electromagnetic spectrum that is

Versatile, Routine UV-Vis Instrument, Cary 60 | Agilent

The Cary 60 UV-Vis spectrophotometer is efficient, accurate, and well-suited as a routine UV-Vis instrument or for use in teaching labs. Perform your UV-Vis

Qualification of UV spectrophotometer | PPTX

The document outlines the qualification process for UV-Vis spectrophotometers, emphasizing the importance of Design Qualification (DQ), Installation Qualification (IQ), Operational Qualification

UV/VIS Spectrophotometer BK-UV1000 BK-V1000 BK

Introduction The UV-Vis Spectrophotometer is an analytical instrument based on the principle of ultraviolet visible spectrophotometry, which uses the radiation

UV/Vis Cuvettes | Glass and Quartz Cuvettes | METTLER TOLEDO

Our Standard and Excellence macro UV and Vis cuvettes offer a wide wavelength range for accurate analysis in food & beverage, academia, chemistry, and pharma. Discover our range now.

Cary 3500 Compact UV-Vis Spectrophotometer

The Cary 3500 Compact UV-Vis is a double beam spectrophotometer featuring new and unique measurement capabilities that can be deployed in regulated

Single Beam UV Spectrophotometer: Uses, Advantages & Why

© 2026 BAGYOU FIBRE NETWORKS - All rights reserved

Their Single Beam UV Spectrophotometer range combines advanced technology, user-friendly design, and robust after-sales support — making Lasany International the obvious choice for

BioTek Epoch 2 Microplate Spectrophotometer

BioTek Epoch 2 Microplate Spectrophotometer The BioTek Epoch 2 microplate spectrophotometer delivers excellent performance for UV-Vis absorbance

Global Laboratory Equipment Supplier | Hinotek

Hinotek: Your trusted global laboratory equipment supplier for microscopes, centrifuges, spectrophotometers & more. High-quality, affordable lab instruments

Double Beam UV Visible Spectrophotometer, SP-MUV25

Double Beam UV Visible Spectrophotometer, SP-MUV25 Wavelength Range: 190-1100 nm Spectral Bandwidth: 2.0 nm Photometric Mode: T, A, C, E LSI design significantly improves system scalability

Ultraviolet And Visible Spectrophotometer(UV) Market Size: Global ...

The global market overview of the Ultraviolet And Visible Spectrophotometer (UV) Market provides a unique perspective on the key trends influencing the industry worldwide and in major markets ...

NanoDrop Microvolume Spectrophotometers and Fluorometers

If you do not need Acclaro sample intelligence, then you may be interested in the Thermo Scientific NanoDrop Lite Plus Spectrophotometer, which delivers trusted NanoDrop microvolume UV-Vis

New spectrophotometer suite expands UV-Vis capabilities

Thermo Fisher Scientific has launched the Thermo Scientific™ GENESYS™ G5 series of Visible and UV-Visible spectrophotometers, designed to help laboratories standardise analysis

UV/Vis Spectrophotometry by METTLER TOLEDO | Learn More

Discover our product range for UV/Vis spectrophotometry, including trusted instruments, smart accessories and automation, reliable services, and compliant software.

UV/Visible Spectrophotometers | VWR, part of Avantor

VWR® Double Beam UV-Vis Spectrophotometer Supplier: VWR International A double beam spectrophotometer suitable for a wide range of applications including general research,
