Uzbekistan Network Cabinet Performance

Overview

In September 2025, Opensignal released a comprehensive report examining Uzbekistan's regional telecommunications landscape and operator performance. Uzbekistan's internet infrastructure has shifted from slow dial-up to fiber and 4G/5G networks, with Uztelecom expanding fiber backbones and boosting international capacity to 3. As of 2022, 2G networks blanket 99% of the population, 3G covers about 90%, and 4G LTE reaches roughly. President Shavkat Mirziyoyev reviewed a presentation on introducing a unified integrated digital platform for public administration, developing the startup ecosystem, and improving the business environment in the telecommunications sector. Digital technologies and Transport On July 6, in Tashkent. The Network Readiness Index (NRI) is one of the leading global indices on the application and impact of information and communication technology (ICT) in economies around the world. This comprehensive national strategy aims to improve the country's digital infrastructure, increase the efficiency of government services. Central Asia's most populous country, Uzbekistan, is undertaking an ambitious push toward a digital economy and electronic governance. In 2024, it ranked 63rd out of 193 countries with an E-Government Development Index (EGDI) score of 0. 7999, entering the “Very High EGDI” group for the first time.
