What are the different models of 90° elbows for cable trays

Overview

The document provides specifications for metallic cable tray elbows and fittings, including catalog numbers, dimensions, and fitting series.

Key Takeaways

90° elbows for cable trays come in horizontal and vertical configurations, with variations in material, bend radius, and NEMA class compatibility to suit different installation requirements. Horizontal 90° ElbowsHorizontal elbows allow the cable tray to change direction along the same plane. They are available in several types: Inside vs Outside Bends: Inside elbows turn the tray inward, while outside elbows turn outward, accommodating different routing needs.

Materials: Common materials include carbon steel, galvanized steel, stainless steel, aluminum, FRP (fiberglass-reinforced plastic), and PVC. Bend Radius: Standard radii include 12", 24", and 36", which help maintain cable integrity during turns. Load Classes: Horizontal elbows are designed to match NEMA classes, such as Class 1 (12B, 12C), Class 2 (20A, 20B, 20C), and higher classes for heavy-duty applications.

Vertical 90° ElbowsVertical elbows enable the cable tray to change elevation, either going up or down: Inside vs Outside Vertical Bends: Inside vertical bends curve the tray inward, while outside bends curve outward, useful for routing around obstacles. Materials and Finish: Options include pre-galvanized steel, aluminum, and carbon steel with electroplated zinc or powder-coated finishes. Bend Radius and Size: Available in 12", 24", and 36" radii, with widths and depths matching the tray system for proper support.

Compatibility: Vertical elbows are also classified according to NEMA standards to ensure structural integrity and load support. Specialized 90° ElbowsHeavy-Duty Steel Elbows: Designed for industrial environments with high cable loads, often galvanized or powder-coated for corrosion resistance. Aluminum Elbows: Lightweight and corrosion-resistant, suitable for outdoor or coastal installations.

FRP and PV

C Elbows: Non-metallic options for highly corrosive environments, providing dielectric properties and preventing galvanic corrosion. Ladder Tray Curved Sections: Pre-fabricated curved kits for ladder-type trays, often cULus classified for safety.

Selection Considerations

When choosing a 90° elbow, consider: Material: Based on environmental conditions and corrosion resistance. Bend Radius: To prevent cable damage and maintain bend integrity.

NEM

A Class Compatibility: Ensures the elbow can support the intended cable load. Installation Type: Horizontal vs vertical, inside vs outside bend, and tray width/depth. These variations allow engineers and installers to select the appropriate 90° elbow for safe, efficient, and code-compliant cable routing in commercial, industrial, and utility applications.

90 Degree Horizontal Elbows Catalog | PDF | Dimension

The document provides specifications for metallic cable tray elbows and fittings, including catalog numbers, dimensions, and fitting series. It details the standard and custom radius options available,

I-BEAM Ladder Horizontal Elbows 90°

Ensure your cable tray solution is designed for your application, with our vast range of ladder tray fittings. Choose from the following: Horizontal elbows, Vertical

Cable Tray

Cable Tray Fitting, 90° Junction Kit. Material: Carbon Steel. Finish: Electroplated Zinc. Includes: (1) Hardware for (1) Tee (2) 90° Bends. CleanTray 45-Degree Elbows for 45-degree turns in applications

Cable tray fittings and accessories

Horizontal flat elbows (90 deg): Ideal for perforated and ladder trays to make clean, right-angle turns. Vertical bends (Riser up / Riser down): Used when trays move

Elbow 90°, large, KKW

GRP-elbow 90°, large, for cable tray KK, with unperforated side rails, with moulded connector, glass fiber reinforced polyester, pressed, RAL 7032, pebble grey. Refer to the product sheets for more

Elbow 90° RES

Elbow 90° for cable tray, 85x102 mm, with unperforated side beams, steel, pre-galvanised according to DIN EN 10346, incl. accessories. EAN 4013339238408. Elbow 90° for cable tray, 85x202 mm, with

Aluminum Channel Inside Vertical Elbows 90°

Aluminum channel elbow fitting for secure cable tray installations. Arc-welded and available in various sizes.

Elbow 90°, large, radius 600mm, KKB-R600

GRP-Elbow 90°, large, radius 600 mm, for cable tray KK, with unperforated side rails, with integrated perforated connector plates, glass fiber reinforced polyester, pressed, RAL 7032, pebble grey

90° Horizontal Elbow | Cable Tray Systems | PUPCO

The 90° Horizontal Elbow provides essential support and enables seamless cable management throughout your cable routing system. All fittings have 3" tangents at the end of curved side rails All

Ergonomic Office Desk Setup That Prevents RSI Pain

Build an ergonomic office desk setup that eliminates pain. Get exact measurements, angles, and tips for your chair, monitor, and keyboard. Start your setup now.

I-BEAM Ladder Horizontal Elbows 90°

Cope I-BEAM horizontal bend for cable tray systems. Compatible with NEMA Classes 12B, 12C, 20A, 20B, 20C, and higher.

Cable Tray Elbow 90 Degree

Discover 90° cable tray elbows in stainless steel & galvanized finishes, compliant with NEMA/IEC standards. Ideal for industrial cable management.

Cable Tray Design and Components Guide
