Considerations When Comparing Prices

Type of splitter: Prices differ between fiber-optic splitters (used in telecommunications) and optical beam splitters (used in labs or photonics). Splitting ratio and number of outputs: Higher division counts or precise splitting ratios typically increase cost. Material and coating: Dielectric, metallic, or pellicle splitters have different price points due to performance and durability.

Power handling and wavelength range: Splitters designed for high-power lasers or specific wavelength ranges may be more expensive. By visiting these suppliers' websites, you can view current prices, compare specifications, and request quotes for bulk or specialized orders. This approach ensures you get accurate and up-to-date pricing for the type of optical splitter you need.
